Intercropping in Semi-Arid Areas

Report of a symposium held at the Faculty of Agriculture, Forestry and Veterinary Science, University of Dar es Salaam, Morogoro, Tanzania, 10–12 May 1976

Editors: J. H. Monyo, A. D. R. Ker, and Marilyn Campbell

The views expressed in this publication are those of the individual author(s) and do not necessarily represent the views of IDRC.
Farmer's field near Ibadan, Nigeria, showing intercrop of cowpea under maize
Contents

Foreword  A. D. R. Ker ................................................................. 5

Addresses to the Participants

Welcoming address  A. M. Hokororo .................................................. 8
Opening address  Hon Mr J. S. Malecela .............................................. 9

Summaries of Papers Presented

An appraisal of some intercropping methods in terms of grain yield, response to applied phosphorus, and monetary return from maize and cowpeas  Y. A. Sudi, H. O. Mongi, A. P. Uriyo, and B. R. Singh ................................................................. 12

Rhizosphere populations in intercropped maize and soybean  T. H. M. Kibani, C. L. Keswani, and M. S. Chowdhury ................................................. 13

Intercropping for increased and more stable agricultural production in the semi-arid tropics  B. A. Krantz, S. M. Virmani, Sardar Singh, and M. R. Rao ................................................................. 15

Cropping systems research: the scope and strategy for research in crop combinations based on experience of previous and current studies  B. N. Okigbo ................................................................. 16

Mixed cropping research at the Institute for Agricultural Research, Samaru, Nigeria  E. F. I. Baker and Y. Yusuf ................................................................. 17

Crop production practices in intercropping systems  R. C. Finlay ................................................................. 18

Effects of crop combinations and planting configurations on the growth and yield of soybeans, millet, and sorghum in intercropping  R. K. Jana and V. M. Sekao ................................................................. 19

Intercropping with sorghum at Alemaya, Ethiopia  Brhane Gebrekidan ................................................................. 21

Studies on mixtures of maize and beans with particular emphasis on the time of planting beans  D. S. O. Osiru and R. W. Willey ................................................................. 23

Intercropping of cassava with vegetables  G. F. Wilson and M. O. Adeniran ................................................................. 24

Some aspects of the productivity and resource use of mixtures of sunflower and fodder radish  R. W. Willey and D. A. Lakhani ................................................................. 25

Preliminary results of intercropping trials in Zaire with maize and certain legumes  Thomas G. Hart and Mangha Kewe ................................................................. 27

(con’t.)
Contents (concluded)

Effects of maize height difference on the growth and yield of intercropped soybeans  D. R. Thompson, J. H. Mnyo, and R. C. Finlay .................................................. 29

Intercropping as a means of producing off-season tomatoes during the hot summer months in the Sudan  A. T. Abdel Hafeez .................. 30

Development of cowpea ideotypes for farming systems in Western Nigeria  Olatunde A. Ojomo ........................................ 30

Cereal–legume breeding for intercropping  R. C. Finlay .................. 31

Cowpea as an intercrop under cereals  H. C. Wien and D. Nangju ........ 32

Selection criteria in intercrop breeding  R. C. Finlay .................. 33

Experiments with maize–bean and maize–potato mixed crops in an area with two short rainy seasons in the highlands of Kenya  N. M. Fisher ............................................. 37

Pest control in mixed cropping systems  H. Y. Kayumbo .................. 39

Measuring plant density effects on insect pests in intercropped maize–cowpeas  B. M. Gerard .............................................. 41

Effects of spraying on yield of cowpeas grown in monoculture and under maize, sorghum, or millet  H. Y. Kayumbo, R. C. Finlay, and S. A. Doto .................. 44

Possible relationship between intercropping and plant disease problems in Uganda  J. Mukiibi ........................................... 45

Attempted control of virus incidence in cowpeas by the use of barrier crops  S. A. Shoyinka ............................................. 46

Induced resistance to bean rust and its possible epidemiological significance in mixed cropping  D. J. Allen ............................................. 46

A limited objective approach to the design of agronomic experiments with mixed crops  N. M. Fisher ............................................. 47

Systematic spacing designs as an aid to the study of intercropping  P. A. Huxley and Z. Maingu ........................................ 50

Future directions of intercropping and farming systems research in Africa  A. D. R. Ker ............................................. 51

Developing mixed cropping systems relevant to the farmers' environment  D. W. Norman ............................................. 52

Assessment of innovations in intercropping systems  C. D. S. Bartlett, E. A. Manday, and G. I. Mlay ........................................ 58

Summary and Conclusions  D. W. Norman ............................................. 59

H. Doggett ............................................. 62

References ............................................. 63

List of Participants ............................................. 67
Recently there has been a resurgence of interest in the study of intercropping in Africa because of (1) a realization that research aimed at improving the existing cropping systems must be based on the understanding of the mechanics, economics, advantages, and disadvantages of the traditional systems that we desire to change and improve; (2) the disappointing response of most African farmers to improved technology of food crop production systems based on sole cropping transplanted from temperate largescale cropping practices with its attendant high energy and capital requirements and risks; (3) the impact or the potentialities of multiple and relay cropping systems work at the International Rice Research Institute based on modifications and improvement of current intensive traditional cropping systems in Taiwan and Indonesia, which significantly increased yield per unit area; (4) the recently recognized fragility of agroecosystems of single varieties of crops grown in sole culture over wide areas of land either with respect to the dramatic buildup of pests and diseases in the "green revolution" areas of Southeast Asia or the widespread devastating epidemic of southern corn blight in the United States where 90% of the corn crop carried a common source of cytoplasm; and finally (5) the recent general concern about the environment and interest in integrated pest management pioneered by ecologists who maintain that mixtures in traditional cropping systems constitute ecologically more stable production systems than large areas of single uniform varieties grown in pure culture. This paper reviewed past and recent studies in intercropping in tropical Africa as a basis for the consideration of the scope, strategy, and methodology in research on cropping combinations and sequences.
