Oil Crops: Brassica Subnetwork

Proceedings of the Third Workshop, Quality Training, and Chinese Project Reports, held in Shanghai, People's Republic of China, 21–24 April 1990

Edited by Abbas Omran
Technical Advisor, Oilcrops Network

Organized by
Ministry of Agriculture, Beijing, China
and
International Development Research Centre, Ottawa, Canada

INTERNATIONAL DEVELOPMENT RESEARCH CENTRE
Ottawa • Cairo • Dakar • Johannesburg • Montevideo • Nairobi • New Delhi • Singapore
TABLE OF CONTENTS

Table of Contents ........................................................... iii
Participants ................................................................. v
Introduction. ABBAS OMRAN ................................................... 1

PART I
QUALITY TRAINING

SECTION 1. Manual of Selected Methods for Glucosinolate
Analysis. D.I. MCGREGOR ....................................................... 6

- Analysis of Glucosinolate in Canola and Rapeseed:
  Determination of Glucosinolates by Gas Liquid
  Chromatography of the Trimethylsilyl ethers. J.K. DAUN,
  D.R. DECLERCQ AND D.I. MCGREGOR ............................... 8
- Determination of Glucosinolate Content by Gas Liquid
  Chromatography of Trimethylsilyl Derivatives of Desulfated
  Glucosinolates. J. P. RANEY AND D.I. MCGREGOR .............. 14
- Determination of Glucosinolate Content by Gas
  Chromatography of Trimethylsilyl Derivatives of Glucose.
  D.I. MCGREGOR ............................................................ 20
- Determination of Total Glucosinolate and Total Indole
  Glucosinolate Content of Rapeseed/Canola Using Glucose
  Oxidase to Measure Glucose and Ferric nitrate to Measure
  Free Thiocyanate Ion. D. I. MCGREGOR ............................ 24
- Determination of Total Glucosinolate Content of Rapeseed/
  Canola Using Immobilized Myrosinase and Glucose Oxidase.
  S. WANG, Z.Y. YUAN AND D.I. MCGREGOR .................... 33

SECTION 2. Manual of Additional Training Lectures and Papers .. 41

- Total Glucosinolate Content In Rapeseed Using Reflectance.
  R.J.W. TRUSCOTT AND J.T. THOLEN .................................. 41
- A Simple Method for Identifying the Low-Eruic Acid and
  Low-Glucosinolate Rapeseed-Turbidity Titration-Colorimetry.
  WU MOUCHENG AND YUAN JUNHUA ................................ 45
- An Outline of Research On Rapeseed Quality Analysis.
  WU XINGYONG .............................................................. 48
- New Methods of Myrosinase Bioreactor and Glucose Sensor
  for Rapid and Accurate Assay of Glucosinolates in Rapeseeds.
  ZHONG YI YUAN, XIAO JUN WANG, TIAN MIN ZHU, PEI YING CHEN
  AND XIN SONG JI ...................................................... 50

PART II
A FINAL SUMMARY REPORT OF SINO–CANADIAN
RAPESEED BREEDING PROJECT. QU NINGKANG

1. Shanghai Academy of Agricultural Sciences(SAAS), Shanghai,
   China. YAN ZHANG, GUANGHUA FANG ............................... 57
2. Institute of Oilcrops Chinese Academy of Agricultural
   Sciences, Wuhan, China. CHENGQING LIU ......................... 61
PART III
BRASSICA SUB-NETWORK COUNTRY PRESENTATIONS

- The Fast Developing Oilcrops Network - A Summary Report. ABBAS OMARAN ............................................................... 78
- A Brief Report on the Brassica Sub-Network. BASUDEO SINGH.. 83
- Research Progress on Rapeseed in Egypt. BADR A. EL-AHMAR... 85
- Quality Breeding in Brassica carinata A. Braun in Ethiopia. GETINET ALEMAY AND HIRUY BELAYNEH .................................. 90
- Some of the contributions of Dr. Hiruy Belayneh to Oilseed Brassica Research in Ethiopia. GETINET ALEMAY ................... 92
- Strategies in Rapeseed and Mustard Development in Kenya. M.J. MAHASI ................................................................. 95
- Status of Brassica Crops in Pakistan. MOHAMMED HANIF QAZI AND PARVEZ KHAllQ .................................................. 98
- National Uniform Rapeseed-Mustard Yield Trials and Their Role in Variety Selection. MOHAMMED HANIF QAZI AND MASOOD A. RANA ................................................................. 108
- Present Status and Future Strategies of Oilseed Brassica Research in India. P.R. KUMAR AND P.S. BHATNAGAR............... 112
- Rapeseed-Mustard in Nepal. B. MISHRA ................................................. 117
- Constraints and Opportunities of Brassica Oilseed Production in Bangladesh. M.A. ISLAM, M.A. KHALEQUE, K.P. BISWAS AND M.R.I. MONDAL ...................................................... 120
- Progress in Rapeseed-Mustard Research in Bhutan. TAYAN RAJ GURUNG ................................................................. 125
- Overview of Rapeseed Production and Research in China. YAN ZHANG ................................................................. 130
- Analysis of Eight High-Quality Rapeseed (Brassica napus L.) Strains for - High and Stable Seed Yield. CHAOCAI SUN, GUANGHUA FANG AND HUA ZHAO ........................................... 134
- Canola Research in Australia. GREGORY BUZZA ..................... 136
- Goals for 1989 - 1991 and Progress of the Barani Agricultural Research and Development Project (BARD) in Pakistan, Pertaining to Brassica. HANS HENNING MUENDEL ............. 137

PART IV
BRASSICA SUB-NETWORK:
DISCUSSIONS / RECOMMENDATION

- Collaborative Programmes - Minutes of Meeting for Scientific Exchange and Institutional Collaborative Programmes among Member Countries of Brassica Sub-Network. 140
- India/China Collaboration - Minutes of Meeting of Counterpart Scientists for International Collaborative Research Between China and India ........................................... 143
- General Discussions and Recommendations .......................... 147
GOALS FOR 1989-1991 AND PROGRESS OF THE BARANI AGRICULTURAL RESEARCH AND DEVELOPMENT PROJECT (BARD) IN PAKISTAN, PERTAINING TO BRASSICA.

Hans Henning Muendel

BARD is a Pakistan-Canada cooperative project, headquartered at the National Agricultural Research Center (NARC) in Islamabad, for research and development in mainly rainfed (Barani) areas. The Pakistan Agricultural Research Council is the Pakistani partner; and the Canadian International Development Agency (CIDA) is the Canadian partner, with Agriculture Canada being the executing agency on behalf of CIDA.

The project was initiated in 1982 and is due for completion, with phase-in to the NARC, by June 1991. One of the major crop development thrusts is on the rapeseed/mustard complex. The main emphasis here is on canola-quality, variety introduction, testing and breeding.

For the rapeseed/mustard component of BARD, our work is organized towards the following seven goals, with current developments briefly indicated:

1. To identify early-generation and advanced lines of Brassica napus, low in erucic acid (<5%) and glucosinolates (<40 μmoles/g), earlier maturing and/or higher yielding than Westar and at least equal to Ganyou-5 (Pak-China 88); and to generate backcrosses of high oil and high yielding lines with canola-quality parents.

Eighty-one advanced-generation lines are planted in preliminary yield trials, being harvested from late April to early May. A summer nursery in the hills (at Kaghan) was used to select the parental lines.

2. To coordinate the National Uniform Rapeseed/Mustard Yield Trial (NURYT); Include BARD-developed 'canola'-quality B. napus lines selected from preliminary yield tests, as well as 'canola'-quality lines from NARC and other centers, and introductions from abroad.

This 16-entry test is grown at 11 locations throughout Pakistan and Azad Jammu/Kashmir, from high rainfall locations and irrigated fields to commonly very dry locations. Eight of the entries are from the BARD-breeding program; three are introductions from Australia (Shiralee, Maluka and Tatyoon), one introduction from Canada (Westar, the current 'canola' standard used by BARD); two introductions from Sweden (one very early, short and upright, the other late but also very upright); Ganyou-5 (a non-canola introduction from China, released last year for its high yield in the North West Frontier Province); and a local non-canola check, DGL.

3. To convene the Annual Technical Program and Work Planning Meeting of Rapeseed/Mustard Scientists in Pakistan. Organize a Rapeseed/Mustard Travelling Seminar.

Twenty-nine scientists from 14 establishments throughout the country participated in the August 29-30, 1989 Annual Technical Program and Work Planning Meeting.

From 25 to 30 scientists participated in the week long Fourth BARD Rapeseed/Mustard Travelling Seminar, held from March 4 to 10, 1990. Research institutes, farmers' fields, seed fields and processing facilities of the Punjab Seed Corporation, oil crushers, solvent extraction and refining factory, soap manufacturing plant - all in Punjab Province - were some of the stops on our way.

4. To increase production of seed 'grown-from' Westar in Punjab and NWFP through contract research, maximization and outreach programs and in cooperation with the Agronomy Component, at O.R. sites.
For the 1989/90 rabi season, approximately 130 ha were seeded for this 'canola' outreach, with seed supplied or sold from BARD.

5. To determine diverse optimum agronomic practices related to weed control, fertilizer use and planting dates, for effective rapeseed/mustard production:

5.a. Determine effective and economical dose of herbicides for the control of broadleaf and grassy weeds in rapeseed/mustard.

Application of 0.5 l/ha of Fusilade gave good results for annual and perennial grassy weed control. Use of Treflan increased Brassica yields.

Two years' data indicate that 100 N and 30 P kg/ha broadcast, followed by 75 N and 30 P kg/ha side-banded at seeding, gave best results.

5.c. Determine the effect of planting date on yield of Brassica species.

Mid-October plantings, in the Islamabad area, gave the highest yields.

6. To promote the production of canola oil from production of the crop on farmers' fields. Encourage private industry involvement in the procurement and processing of canola seed and the sale of canola oil.

BARD purchased farmers' canola seed and arranged to have it crushed and refined commercially, both the 1987/88 and 1988/89 crops. In each case, around 13 tons of refined oil were available for sale through commercial stores and through the BARD project. Sales were made at farmers' field-days and various other fairs, open houses, etc. In the first year, questionnaires were given with each 2.5 L tin sold. As a refund, Rs 5 was assured for filled out questionnaires, a good return of over 1000 was achieved. Responses on use of the oil were overwhelmingly positive.

7. To train Senior Scientific Officer in operation of a plant breeding program and two Senior Scientific Officers in rapeseed agronomy and extension.

One person was sent for post-graduate studies to Saskatoon. One Ph.D holder was hired for becoming involved in the breeding aspects. One BARD Scientific Officer, along with another one from NARC, was sent to India for 4 weeks to attend Brassica breeding/agronomy training session sponsored by IDRC Brassica Sub-Network in December 1989.

BARD is financially supporting Ph.D. studies of the same Scientific Officer, with the Oilseed Advisor being accepted by the Qaid-i-Azam University in Islamabad as Co-Advisor for the Ph.D program.

8. To evaluate and provide supervision to Scientific Authority on research contracts with other agencies, funded by BARD.

The Oilseed Advisor currently acts as Scientific Authority on seven contracts involving various aspects of rapeseed/mustard research in three provinces.

The BARD Agricultural Engineering group, in collaboration with ourselves and the Farm Machinery Institute of NARC is involved in:

- modification of tillage and tractor-mounted seeding equipment for rapeseed/mustard: for improved stand establishment by improving furrow openers, packing wheels and delivery systems; and

- procuring and evaluating rapeseed reaping and threshing equipment (e.g. refer to experimental/small plot reaper from Swift Machine and Welding Ltd.)
