Corporate Governance and Competition Policy

Spencer Weber Waller *

Introduction

Corporate governance law addresses the misaligned incentives between officers and directors of publicly-owned companies and their shareholders, and how this can lead to the destruction of shareholder value. Antitrust law governs the interaction between corporations and other economic actors in the marketplace and prohibits and penalizes anticompetitive agreements, unilateral conduct which unreasonably injures competition, and mergers and acquisitions which may substantially lessen competition.

This article explores the puzzling lack of meaningful interaction between these two fields of law which govern the internal and external operations of key economic players in our economy. While a handful of commentators have lamented the lack of a closer organic connection between these two bodies of law, most do not even notice. This article goes beyond the conventional disconnect and discusses how to create a more unified approach to two key areas of business law in order to promote the interests of both shareholders and consumers in a more systematic and meaningful way.

In order to better draw the links between the two fields and create an ongoing conversation between different fields, different working professionals, different types of expertise, and even different languages, I proceed as follows. In Parts I and II, I briefly describe the traditional view of both the scope and content of corporate governance and antitrust law. In Part III, I then offer an overview of why there has been little overlap or interaction between these critically important bodies of business law. Part IV shows why and how we can do better. I examine five areas of antitrust law where a greater knowledge of,

* Professor and Director, Institute for Consumer Antitrust Studies, Loyola University Chicago School of Law. This article is an expansion of remarks originally presented at workshops at the University of Utah Law School and the Organization for Economic Cooperation and Development, Paris, France, DAF/COMP/M(2010)1/ANN3. Thanks to Frank Ballantine, Theodore Banks, Sam Brunson, Jill Fisch, James Fanto, Andrew Gold, Jesse Markham, Charles Murdock, Arthur Pinto, Steven Ramirez, Mark Roe, Edward Rock, Larry Schor, D. Daniel Sokol, and Maurice Stucke for their comments and advice and Joseph Van Leer for his excellent research assistance.
and appreciation for, the modern learning in corporate governance law would provide for both better competition and corporate governance law and policy.

I begin Part IV with an overview of corporate compliance and the unfortunately limited role that corporate governance law plays in ensuring lawful behavior. I then look at interlocking directorates, the one provision of the Clayton Act that directly addresses corporate governance concerns. Second, I analyze the critical issue of corporate compliance and cartel behavior. Third, I discuss the more nuanced interaction between antitrust enforcement and corporate governance for other types of agreements between competitors which may sometimes, but not always, violate antitrust law’s rule of reason. Fourth, I focus on merger policy where a better understanding of corporate governance and corporate finance literature would provide a roadmap for identifying certain categories of transactions which neither promote shareholder interests nor efficient market competition. Finally, I examine the broader question where corporate governance principles will, of necessity, continue play its currently limited role in ensuring lawful unilateral company behavior.

My conclusions begin the process of how to do better. Certain of the changes fall on the corporate governance side including greater duties and liabilities for officers and directors to prevent harmful and illegal conduct that injures shareholders. Other changes fall on the antitrust side of the fence including a greater skepticism for claims of synergies and efficiencies in certain categories of mergers that have proven time and time again to do nothing to enhance shareholder value except when competition is harmed. But the most important change will be a greater willingness for practitioners and policymakers to more directly communicate and coordinate so corporate actors can pursue legitimate strategies to build value for shareholders and prevent unlawful anticompetitive behavior and, at the same time, not pursue more dubious strategies that currently fall between the cracks of both bodies of law.

I. The Birth of Corporate Governance

*The Modern Corporation and Private Property* is the most influential book in the field of corporate governance.¹ It analyzes how managers and directors of large corporations often act in their own

---
best interests rather than the best interests of the shareholders who are the real owners of the company. This important book was written in 1933 by Adolph Berle, a professor of corporate law at Columbia University, who also worked for President Roosevelt and the New Deal in numerous capacities. ² His co-author was Gardiner Means, an economist at Harvard University who did much of the empirical work for the project.³

The book analyzed how corporations had evolved from the 19th century where they were primarily small operations owned and operated by an identifiable number of individuals, often family members.⁴ By the early 1930s, corporations were vastly larger and more powerful enterprises with an enormous number of shareholders who bought and sold their shares on stock exchanges.⁵ Typically no one shareholder owned more than a tiny fraction of the shares of the company.⁶

Berle and Means introduced the concept of the separation of ownership and management to describe the modern corporation where the real power lay in the hands of managers and boards of directors who typically owned only small amounts of stock in the company.⁷ This change meant that ownership changed from active to passive.⁸ But it also meant that the form of the wealth that ownership conferred was more liquid.⁹

The small number of insiders (managers and directors) had greater knowledge and different incentives than the large number of outsiders (the shareholders) and could operate the company for their own benefit, potentially harming the shareholders and the corporation itself. The actual power within the corporation lay with those who appointed the directors, typically senior management themselves.¹⁰

² For a succinct biography of his public service see http://www.bookrags.com/biography/adolf-augustus-berle-jr/.
³ BERLE & MEANS, supra note 1, at preface.
⁴ Id. at 66.
⁵ Id. at 67.
⁶ Id. at 68. This is true in most countries, but most prevalent in the United States. JONATHAN A. MACEY, CORPORATE GOVERNANCE 3 (2010).
⁷ BERLE & MEANS, supra note 1, at 68. A number of these themes had been previously introduced by Berle in an earlier article. A.A. Berle, Jr., Corporate Powers as Powers in Trust, 44 HARV. L. REV. 1049 (1931).
⁸ BERLE & MEANS, supra note 1, at 66.
⁹ Id. at 67.
¹⁰ Other aspects of the separation of ownership and control came through legal devices like pyramiding, the issuance of non-voting shares, excessively weighted
The effective result was a self-perpetuating management which often pursued its own interests rather than those of the true owners of the corporation.\textsuperscript{11} Although Berle and Means did not use this term, later writers referred to this as the agency cost problem.\textsuperscript{12} Thus, the field of corporate governance was born to consider appropriate ways to cure or limit the agency cost problem in the modern public corporation.

Berle and Means termed this a problem of “economic governance.”\textsuperscript{13} The book argued for more voting rights for shareholders, more disclosures by management, and other controls for the benefit of the shareholders.\textsuperscript{14} The authors also proposed a broader social role for the corporation as a key institution in the modern economy and society.\textsuperscript{15}

The influence of Berle and Means cannot be understated. It is probably the most cited treatise in corporate law. It has been cited thousands of times in the academic literature and has been credited as the inspiration of much of modern corporate law, securities regulation, the shareholder democracy movement, the market for corporate control, incentive based pay schemes for executives, and most other legal proposals to address the conflicting incentives between corporate insiders and shareholders.

For example, there is a direct relationship between the concerns of Berle and Means and the two long standing duties fiduciary duties imposed on corporate directors; the duty of care and voting shares, and voting trusts and more real world concerns where even a minority interest in a large corporation could yield effective control. \textit{Id.} at 70.

the duty of loyalty.16 “Good faith” is a subset of both duties, as all directors must act in good faith in performing their duties.17

The duty of loyalty requires that directors consider the interest of the corporation over any personal interests so that they do not profit improperly at the corporation’s expense and avoid self-dealing.18 This duty essentially aims to prevent conflicts of interest, self-dealing between directors and the corporation which injure shareholders, and other conduct which exacerbates agency costs.

The duty of care generally requires that directors act in good faith and with the degree of diligence, care, and skill that an ordinarily prudent person would exercise under similar circumstances.19 In Delaware, and many other states, directors are presumed to have made informed, rational decisions in an honest and well-meaning way to further their business.20 This insulates directors from judicial review of their decisions and shields them from personal liability. This presumption rests on the understanding that directors act on a disinterested, informed, and good faith basis.

Critical to understanding these duties is the business judgment rule. The business judgment rule is a “presumption that the Board acted independently, with due care, in good faith and in the honest belief that its actions were in the stockholders’ best interests.”21 Under the business judgment rule, courts will not second guess a board decision or substitute its own views if the decision of the board can be attributed to “any rational business purpose.”22 The presumption is

16 In re Caremark Int’l, Inc. Deriv. Litig., 698 A.2d 959 (Del. 1996). See generally, James A. Fantô, Directors’ and Officers’ Liability (2d ed. 2007). There remains a dispute in the literature whether the duty of good faith is a subset of loyalty rather than care or whether it is an overarching duty covering both concepts. The literature on both sides is vast and it is beyond the scope of this article to resolve this conceptual conundrum.

Corporate Governance and Competition Policy

strongest when the decision of the board was approved by a majority of independent, disinterested directors.\textsuperscript{23} Thus, plaintiffs have a heavy burden to both plead and prove that the board has breached its fiduciary duties of good faith, or due care.\textsuperscript{24} Only then, will the court review the merits of the plaintiff’s allegation to determine whether the conduct in question was fair to the corporation and its shareholders.\textsuperscript{25} Even then, in the absence of faulty process, uninformed decision making, or a conflict of interest, the courts have been extremely reluctant to impose liability on corporations or its directors, no matter how disastrous the consequences of the board’s decision turned out to be.\textsuperscript{26}

\textsuperscript{23} Grabow v. Perot, 539 A.2d 180, 190 (Del. 1988).

\textsuperscript{24} The application of the business judgment rule by courts is further complicated by the procedural rules which apply to shareholder derivative suits. A derivative lawsuit is a claim brought by shareholders on behalf of the corporation to redress harm done by the publicly traded company, its officers, or directors. Because such causes of action are deemed to belong to the corporation, the plaintiff normally must make a demand on the corporation (and its board of directors) for permission to sue on behalf of the corporation. The board of directors may accept or reject such demands and the recommendation of the board will be judged under the business judgment rule. Zapata Corp. v. Maldonado, 430 A.2d 779, 784 (Del. 1981). Not surprisingly most boards reject demand to initiate derivative actions. However, demand may be excused when it is futile. Aronson v. Lewis, 473 A.2d 805, 812 (Del. 1984). This can include situations where the director’s duty of loyalty is subject to challenge or where the board has acted outside the confines of the business judgment rule. Even in this situation, the board of directors can convene a special litigation committee to investigate the merits of the plaintiff’s claim, report to the board, and recommend whether the case should be dismissed or continued. Zapata, 430 A.2d at 788-89. Most special litigation committees recommend the dismissal of the lawsuit they have investigated. The special litigation committee’s recommendations are tested by the court first to determine whether the special litigation committee utilized a fair process in its determination. Only then would the court proceed to the “merits” of the case challenging the alleged violation of the board’s duties and the harm to shareholders. See generally, \textit{FANTO, DIRECTORS & OFFICERS, supra} note 16 at § 5.7; \textit{MACEY, supra} note 6 at 130-40; \textit{BLOCK, supra} note 21, at 1379-1808. REV. 1309 (2009).

\textsuperscript{25} See e.g., \textit{In re Walt Disney Co. Deriv. Litig.}, 906 A.2d 27 (Del 2006); Cf., Jennifer Erickson, \textit{Corporate Governance in the Courtroom: An Empirical Analysis}, 51 WILL. & MARY L. REV. 1749 (2010) (study of federal court shareholder derivative actions showing few damage awards, but frequent changes in governance practices).

\textsuperscript{26} See e.g., \textit{In re Caremark Int’l Inc. Deriv. Litig.}, 698 A.2d 959, 967 (Del. 1996).
The business judgment rule applies to allegedly poor action, rather than inaction, or an outright failure in board oversight. The board will be legally responsible for its failure to act when it has failed to consider a particular decision or exercise its judgment at all.\textsuperscript{27} Taken as a whole, the board of directors (and particularly the outside directors) act as agents for the shareholders, but enjoy substantial protection from legal liability for their decisions (or lack thereof) when their actions (or inactions) were the result of a proper process, good faith, informed decision making, and without an outright conflict of interest.\textsuperscript{28} This modern template has arisen out of the concerns first raised by Berle and Means, even if the modern expression of these concerns is different from what the founders of corporate governance themselves advocated for the modern corporation.

II. Antitrust and the Market

In contrast to corporate governance law which concerns itself with the internal organization of the public corporation, antitrust law is the law of competition between firms in the marketplace (no matter what the internal structure). The federal Sherman Act and later statutes prohibit three main forms of anticompetitive behavior without regard to whether the market actors are publicly traded corporations, privately owned corporations, partnerships and related entities, sole proprietorships, or actual individuals.

Section 1 of the Sherman Act prohibits “contracts, combinations and conspiracy” in “restraint of trade.”\textsuperscript{29} As early as 1911, the Supreme Court held that only those agreements which “unreasonably” restrict competition are unlawful under Section 1 of the Sherman Act.\textsuperscript{30} However, certain agreements are so inevitably destructive of competition that they are per se unreasonable, and hence

\textsuperscript{27} In addition to the balance of fiduciary duties and the protections of the business judgment rule imposed by Delaware and other states corporate law, Congress has entered the picture in recent years with the Securities Litigation Uniform Standards Act of 1998, 15 U.S.C. § 78bb(f)(1) and the Private Securities Litigation Reform Act of 1995, Pub. L. 104-67, 109 Stat. 737, which require heightened pleadings standards for securities fraud allegation, automatic removal to federal court, and preemption of more generous state court rules.

\textsuperscript{28} FANTO, DIRECTORS AND OFFICERS, supra note 16, at § 2.2.3(A)(3)(c).

\textsuperscript{30} Standard Oil Co. of New Jersey v. United States, 221 U.S. 1 (1911).
unlawful.\textsuperscript{31} Examples of such per se unreasonable agreements between competitors include price fixing, market division, and output restrictions which are normally prosecuted as criminal offenses by the Antitrust Division of the Justice Department.\textsuperscript{32} All other agreements require more detailed and complete examination under a full rule of reason analysis to determine whether on balance they unreasonably restrict competition.\textsuperscript{33} In this analysis, only the net effect on competition is legally relevant and not whether the agreement injures competition, but promotes some other socially useful value.\textsuperscript{34}

Anticompetitive behavior by single firms is covered by Section 2 of the Sherman Act which prohibits “monopolization” and “attempts to monopolize.”\textsuperscript{35} In order to unlawfully monopolize, a firm must have monopoly power and engage in unlawful or exclusionary conduct to either acquire or maintain that monopoly.\textsuperscript{36} In order to unlawfully attempt to monopolize, a firm must 1) have specific intent; 2) engage in unlawful or exclusionary conduct; and 3) have at least a dangerous probability of achieving monopoly power.\textsuperscript{37}

The difficult issue for Section 2 analysis is identifying the difference between unlawful and exclusionary conduct on the one hand and hard competition or competition on the merits on the other hand. While the courts have struggled with this issue, there appears to be an evolving consensus that the proper approach is something akin to the rule of reason used in Section 1 analysis. In a number of recent Section 2 cases, the courts have sought to determine whether there is a significant adverse effect on competition and whether that effect is

Gen., Antitrust Div., \textit{The Evolution of Criminal Antitrust Enforcement Over the Last Two Decades}, Address before the National Institute on White Collar Crime (Feb. 25, 2010), available at \url{http://www.justice.gov/atr/public/speeches/255515.htm}.
\textsuperscript{35} 15 U.S.C. § 2. In addition Section 2 also prevents conspiracies to monopolize, a little used provision which is applied in a manner very similar to Section 1 of the Sherman Act.
outweighed by efficiency considerations, business justifications, or other pro-competitive justifications for the conduct at issue.38

Finally, Section 7 of the Clayton Act prohibits mergers and acquisitions of all types if they tend to significantly lessen competition or tend to create a monopoly.39 Here, the focus is on prediction and incipiency and blocking acquisitions, regardless of form, if they would create a significant risk of harm to competition in the future. Government guidelines focus on the risks that the transactions will facilitate either outright collusion among the remaining players in the markets or anticompetitive oligopolistic (but nominally independent) price coordination.40 In addition, the guidelines are equally concerned if a transaction would allow the merged entity to unilaterally raise price or restrict output.41 Most significant acquisitions are notified to the federal antitrust agencies in advance, although the transactions can also be challenged after closing.42 Joint ventures, strategic alliances, and other types of partial mergers can be analyzed under Section 7, although they may also be reviewed under Section 1 of the Sherman Act.43

The antitrust laws only rarely are concerned with the internal structure of the firms whose conduct is under review. For example, the form of a merger and acquisition is only relevant to the extent that it provides evidence of the likely competitive effect of the transaction. However, a handful of situations exist where the form or structure of a corporate actor is necessary for antitrust purposes. As discussed below in part IV-A, Section 8 of the Clayton Act prohibits interlocking directorates under certain circumstances where it is necessary to understand both the competitive relationship of the firms in questions and the structure of their board of directors to determine whether this provision has been violated.44

41 2010 Horizontal Merger Guidelines, supra note 40, at § 6.
44 See notes 129-40 and accompanying text.
In addition, sometimes corporate structure and organization is relevant to understanding whether the antitrust laws even apply. For example, Section 1 of Sherman Act requires the presence of a “contract, combination or conspiracy” before competitive effects come into question.\textsuperscript{45} This requires some sort of an agreement for Section 1 to come into play, with Section 2 of the Sherman Act being the only antitrust provisions applying to truly unilateral conduct. The Supreme Court has determined that an agreement for Section 1 purposes means an agreement between two or more economically independent actors.\textsuperscript{46} Thus, the Supreme Court has held that a corporation cannot conspire with its own employees, directors, officers, unincorporated divisions, and wholly owned subsidiaries.\textsuperscript{47} The lower courts have extended this analysis and held in most circumstances that a corporation also cannot conspire with majority owned subsidiaries, or between sister subsidiaries owned by the same parent, where there is effective working control by the parent corporation.\textsuperscript{48}

III. Ships Passing in the Night

At the broadest level, corporate governance historically has focused on behavior and structure within the firm and antitrust has focused on behavior and structure between firms in the market. One is almost sub-atomic in nature and the other focusing on the interaction between business atoms and molecules. Unlike scientific inquiry however, the two fields have proceeded without any deep interaction and with little attempt to even understand each other’s domain.\textsuperscript{49}

There are both historical and professional reasons for these separate spheres of expertise and legal practice. Corporate law was

\textsuperscript{45} 15 U.S.C. § 1; see generally ABA SECTION OF ANTITRUST LAW, PROOF OF CONSPIRACY UNDER FEDERAL ANTITRUST LAWS (2010).
\textsuperscript{47} Id. at 777.
\textsuperscript{49} One of the few scholarly pieces to connect the two fields focused on the boundaries between firms and markets as the key to its analysis. Edward B. Rock, Corporate Law Through An Antitrust Lens, 92 COLUM. L. REV. 497 (1992).
created first and until the Great Depression was almost entirely a creature of state law. In contrast, antitrust began at the state level, but rapidly became almost exclusively national as state antitrust law was proven ineffective in controlling national corporations. There was a partial early convergence as strict anti-cartel rules, but loose merger rules, in the late nineteenth century were partially responsible for the initial wave of mergers that created and strengthened the large national corporations of the gilded age. But then paths diverged.

When the Sherman Act was passed in 1890, there was no specialized antitrust discipline or a specialized antitrust branch of the practicing bar or legal academy. Antitrust law as a discipline did not appear until the 1920s and early 1930s. By then, the Sherman Act had been supplemented by additional antitrust statutes and the courts had decided dozens of antitrust cases. The Federal Trade Commission ("FTC") had been created in 1914 and the Antitrust Division of the United States Department of Justice ("DOJ") in 1933. Until the 1920s, antitrust was not even taught as a separate subject in American law schools. To the extent it was taught at all, it represented a small piece of such courses as Contracts, Corporations, or Business Planning.

Law firms were similarly slow in recognizing antitrust as a separate discipline. Few, if any, major law firms had separate antitrust departments until the early 1950s. The American Bar Association

Corporate Governance and Competition Policy

("ABA") did not even have a separate Antitrust Section until 1952. In contrast, corporate law was a well established specialty within the bar more than a half century earlier. While corporate governance law was more of a creature of the 1930s it was quickly absorbed into this existing professional structure of the corporate bar and remained separate from the professional structure and discourse of antitrust.

As a result of the impact of the Berle and Means treatise and other developments in the wake of the stock market crash and the great depression, corporate governance law became part of the New Deal agenda and began to make its way into the legal structure of both state and federal law in the 1930s and beyond. At the federal level, the Securities and Exchange Commission was created to regulate the offerings of securities to the public and then later the operation of securities brokers and dealers. However, the majority of corporate governance law was the province of state law, and Delaware in particular, and consisted of more explicit duties of loyalty and care to better align the interests of board members, corporate officers, and shareholders.

Antitrust was not a significant part of either the analysis nor prescription in Berle and Means or the resulting corporate governance legal regime. This is not particularly surprising. Although Berle was knowledgeable and interested in antitrust issues, antitrust was at its absolute nadir at the time he was writing his masterpiece on corporate governance. When The Modern Corporation and Private Property

61 See, e.g., Weinberger v. UOP, Inc., 457 A.2d 701 (Del. 1983); Aronson v. Lewis, 473 A.2d 805, 816 (Del. 1984); see generally MACEY, supra note 6, at 131. See e.g. Bus. Roundtable v. SEC, 905 F.2d 406 (D.C. Cir. 1990) (invalidating SEC rule relating to voting rights by class of securities as beyond powers conferred by federal law).
was published in 1933 during the depths of the Great Depression, the New Deal was following a collectivist path and antitrust had been almost entirely preempted or actually co-opted in the service of the de facto cartelization of the US economy under the National Recovery Act (NRA). What little antitrust enforcement that existed was undercut by lax Supreme Court interpretation of the core anti-cartel provisions of Section 1 of the Sherman Act, also seemingly in deference to the special needs and circumstances of the Great Depression. Antitrust law thus was effectively moribund until the NRA was held unconstitutional in 1935.

It was only then that President Roosevelt, out of principle, pragmatism, or perhaps desperation, chose to revive antitrust law and free market competition as a tool to solve the lingering depression. Robert Jackson, as head of the Antitrust Division of the Justice Department, began the cautious revival of antitrust enforcement. This revival then kicked into high gear during the five year tenure of Thurman Arnold as head of the Antitrust Division from 1938-43.

Under Jackson, Arnold, and beyond, the Justice Department brought hundreds of criminal and civil cases in cartel and monopolization cases. This activism expanded into the merger area as well once Congress strengthened Section 7 of the Clayton Act into its modern form in 1950. As a result of these government cases and numerous additional private cases, antitrust law shifted toward more and more per se rules, presumptions against monopolization, and

---

64 Appalachian Coals, Inc. v. United States, 288 U.S. 344 (1933).

nearly absolute prohibition of significant mergers of any kind. Such limitations proved far more significant than the more modest corporate governance constraints of that era.

One snapshot of this era can be found in *The Corporation and Modern Society*, a collection of essays edited by the economist Edward Mason in 1960 written by prominent legal and economic scholars. This collection reflects its times where antitrust rules were strong and corporate governance constraints weak. The primary concerns expressed are the oligopoly status of key U.S. corporations and the economic, political, and social power of corporations more generally. Pure corporate governance concerns or agency costs were at most a secondary theme of the book and a direct concern of perhaps two of the chapters in the volume.

Enter the market for corporate control. Henry Manne argued in his seminal article in 1965 that overly stringent antitrust rules against mergers did little to protect competition and primarily served to entrench inefficient management to the detriment of shareholders, consumers, and competition more generally. Manne directly cited Berle and Means and their concern for the detrimental effects of the separation of ownership and management as one of the key bases for his proposals and stated: “the market for corporate control gives to these shareholders both power and protection commensurate with their interests in corporate affairs.” Later influential writings by Frank Easterbrook, Daniel Fischel, and others echoed these themes and

---

72 *THE CORPORATION IN MODERN SOCIETY* (Edward Mason ed. 1960).

77 *Id.* at 112.
advocated a robust takeover market as a way to constrain managerial inefficiency, prevent rent seeking, and increase shareholder value.\textsuperscript{78}

The calling for a well developed market for corporate control required important changes in both antitrust and corporate governance. At the time of Henry Manne’s original article, there were strong presumptions that any merger that increased market concentration to any appreciable degree was unlawful.\textsuperscript{79} It got to the point where Justice Potter Stewart noted in frustration that the only apparent consistency in antitrust challenges to mergers was that “the government always wins.”\textsuperscript{80}

This rapidly changed for antitrust in general and mergers in particular. Most per se rules outside of the cartel area were abandoned in favor of a broader more economically intensive inquiry under the rule of reason.\textsuperscript{81} The plaintiff, rather than the defendant had the burden of proof that a defendant had meaningful monopoly power (or nearly so) and that it had acted to harm competition without an offsetting business justification.\textsuperscript{82}

In the merger area, the change was even more dramatic. The presumption of illegality where industry concentration increased was weakened.\textsuperscript{83} Government guidelines laid out a much higher degree of market concentration and a more rigorous analytical framework before the government would seek to challenge most mergers.\textsuperscript{84} The courts, in turn, began to hold the government to these higher burdens of proof, although the guidelines on their face only spoke to questions of

\textsuperscript{78} Macey, supra note 6, at 118-26; Frank Easterbrook & Daniel Fischel, Corporate Control Transactions, 91 YALE L.J. 698 (1982).

\textsuperscript{84} 2010 Horizontal Merger Guidelines, supra note 40, at § 0.1.
prosecutorial discretion and not directly to case law and litigation.\textsuperscript{85} The rise of the market for corporate control thus coincided with a weakening of merger control and even calls within the Reagan Administration in the 1980s to abolish Section 7 of the Clayton Act entirely.\textsuperscript{86}

On the corporate governance side, important changes were happening as well. Increased duties to maximize the value of the corporation emerged once a meaningful bidding process has begun.\textsuperscript{87} On the other hand, the courts were much less willing to limit corporations from enacting poison pills and similar anti-takeover devices which protected management.\textsuperscript{88} Finally, a number of states enacted anti-takeover statutes which generally survived court challenge.\textsuperscript{89}

In more recent times, the corporate scandals of the late 1990s, the new millennium, and the ongoing financial crisis have led to other important changes in corporate governance, often reactive to the crisis or scandal of the moment. The accounting and fraud scandals of the Enron era led to the Sarbanes-Oxley Act and greater duties of CEOs and CFOs in connection with the preparation and certification of financial statements.\textsuperscript{90} The 2008 financial crisis that began with the melt-down of the US sub-prime mortgage market and then spread throughout the US and global economy led to a series of financial reform measures enacted in the summer of 2010 all of which contain regulatory, disclosure, and corporate governance proposals of different natures.\textsuperscript{91} Thus, in some areas of corporate governance the federal

securities and regulatory provisions may have far greater impact on corporate boards and committees than the more forgiving Delaware corporate law.\footnote{FANTO, supra note 16, at § 3.32.}

At the same time, antitrust law and enforcement appear to be on a mild resurgence. Most commentators consider the Bush era Antitrust Division to be relatively inactive on antitrust enforcement, on any issue other than criminal cartel enforcement, and also typically hostile to private antitrust suits.\footnote{There is a more complex picture at the FTC during this period which continued to bring a number of high profile civil non-merger cases. See William E. Kovacic, Burnell Lecture on U.S. Federal Trade Commission, The Future of U.S. Competition Policy at Home and Abroad (23 Mar., 2009), available at \url{http://www.ftc.gov/speeches/kovacic/090323burrelllecture.pdf}. One example of the difference in enforcement philosophies between the two agencies during this era was the Schering-Plough case where the FTC lost an attempted monopolization case at the appellate level and unsuccessfully sought certiorari in the Supreme Court alone and against the express opposition of the Justice Department. FTC v. Schering-Plough, 402 F. 3d 1056 (11th Cir. 2005), cert. denied, 548 U.S. 919 (2006). Another example was the refusal of the FTC to sign onto the now withdrawn report issued by the Antitrust Division proposing overly narrow standards for the imposition of liability for unilateral conduct under Section 2 of the Sherman Act. U.S. Dep’t of Justice, Competition and Monopoly: Single Firm Conduct Under Section 2 of the Sherman Act (2008), available at \url{http://www.justice.gov/atr/public/reports/236681.pdf}.}

In contrast, the Obama administration almost immediately announced plans for more aggressive enforcement of the antitrust laws beyond the cartel area,\footnote{Christine A. Varney, Assistant Attorney General Antitrust Division, U.S. Department of Justice, Vigorous Antitrust Enforcement in this Challenging Era, Remarks as Prepared for the Center for American Progress (May 11, 2009), available at \url{http://www.justice.gov/atr/public/speeches/245711.htm}; see also Spencer Weber Waller & Jennifer Woods, Antitrust Transitions, 32 WORLD COMP. L. & ECON. Rev. 189 (2009).} and has pursued a modestly expanded array of investigations, cases, settlements, and amicus briefs in its first and a half year in office.

What emerges is a pattern of oscillation. At most times over the past 120 years, the relative strength of antitrust and corporate law has been like two sine waves which only occasionally intersected as one field was on the rise and the other was been on the decline. We are at a rare historical intersection point where both fields are in positions of relative strength and only time will tell if that is a stable trend or merely another brief intersection as one field is strengthened through legislation and court interpretation and the other weakened by
the same developments. This continuing oscillation is another explanation for the very rare interaction for two fields both intimately concerned about corporate actors and their interaction in the marketplace.

The current equilibrium, if it holds, is an equally rare opportunity to do better. When antitrust and corporate governance were out of synch it was widely believed that these two bodies of law were substitutes. Today, the better view is that they are complements and should operate in a coordinated and consistent manner to promote the interests of both consumers and shareholders.

IV. Towards A More Meaningful Interaction

This section looks at several of the more obvious and important areas where an understanding of agency costs can inform the broader market competition questions that antitrust law addresses, and vice-versa. Woven throughout the discussion is the critical area of corporate compliance law where the internal structure and operation of corporate entities can affect their ability to comply with antitrust (and other legal and regulatory schemes) and detect violations when they occur.

---

95 There will always be areas of corporate governance like executive compensation, board selection and retention, shareholder voting, and accounting rules and audit procedures that only rarely implicate competition policy. Although beyond the scope of this article, Professor Macey has identified the “cartelization” of stock exchanges, accounting firms, and credit rating agencies as an additional source of poor corporate governance. MACEY, supra note 6, at 105-17. By “cartelization”, Professor Macey appears to mean increased concentration and the creation of regulatory barriers to entry, rather than a literal private conspiracy in restraint of trade in violation of Section 1 of the Sherman Act.

Congress has recognized at least one piece of this competition-corporate governance puzzle with the passage of the Credit Rating Duopoly Relief Act, H.R. 2990, 109th Cong. (2009). The effect of this statute is still uncertain, but the dismal performance of the credit rating industry in the financial crisis of 2008 suggests that neither competition nor corporate governance has improved in this sector. John P. Hunt, Credit Rating Agencies and the ‘Worldwide Credit Crisis’: The Limits of Reputation, the Insufficiency of Reform, and a Proposal for Improvement, 2009 COLUM. BUS. L. REV. 1, 9-13 (2009).

97 D. Danny Sokol, Competition Policy and Comparative Corporate Governance of State-Owned Enterprises, 2009 BYU L. Rev. 1713.
Part A introduces the general standards for corporate compliance. Part B examines interlocking directorates, the only current area where Congress has directly addressed the antitrust-corporate governance intersection by statute. Part C looks at cartel policy, where better governance principles and compliance policies can deter and prevent the type of hard-core antitrust violations that constitute criminal violations for the corporation and its officers, directors, and employees. Part D looks beyond past cartel issues into the murkier areas of the anticompetitive agreements which are not illegal per se, but are judged on a case-by-case basis under the Rule of Reason. Part E looks at merger policy, an area where greater attention to corporate governance concerns illustrates certain weaknesses in current antitrust thinking. Finally Part F analyzes the area of monopolization and attempted monopolization where the uncertainties of what constitutes market power and its unlawful exercise are sufficiently vague and nuanced that the current regime of the business judgment rule normally seems appropriate.

A. Corporate Compliance

Although most courts historically rejected imposing a requirement that boards institute compliance programs because directors “are entitled to rely on the honesty and integrity of their subordinates until something occurs to put them on suspicion that something is wrong,” recent decisions signify a shift in such ideology. First, Allis-Chalmers established a duty to act when directors become aware of “red flags,” e.g., illegal or wrongful activities. This decision was Delaware’s first addressing to what extent directors must ensure legal compliance of the companies officers and employees.100

A derivative suit alleged that the directors of Allis-Chalmers were liable for their employee’s violations by reason of their failure to take action to uncover and prevent antitrust violations on the part of any employees of Allis-Chalmers.101 The facts demonstrated that the directors had no actual knowledge of any antitrust violations or even

99 Id.
100 Id.
101 Id. at 127.
reason to know of any potential wrongdoing until officials announced an investigation of the company. Nevertheless, the plaintiffs argued, in the alternative, that, by virtue of their fiduciary duties, directors were bound to put a compliance system into effect, which would bring misconduct to their attention.

The Delaware Supreme Court disagreed. The court reasoned that precedent rejected such a burden, and noted that directors may rely on the honesty and integrity of corporate employees in the absence of red flags. Thus, the Allis-Chalmers directors were not liable for the actions of their subordinates.

Allis-Chalmers broke significant ground by recognizing that a director’s fiduciary duties could include the duty to monitor, however, it provided little incentive for directors to actually “monitor.” Notably, the court, in creative language, refused to impose a duty “to install and operate a corporate system of espionage to ferret out wrongdoing.” In other words, there was no duty to institute corporate compliance systems. In 1996 this changed.

In a groundbreaking shift in corporate governance, the Delaware Court of Chancery in the Caremark litigation expanded a director’s duty to act not only when exposed to obvious signs of wrongdoing, but to be informed and be vigilant to uncover wrongdoing. The decision stemmed from a federal investigation of “kickback” payments to physicians in exchange for patient referrals. Caremark eventually entered into a $250 million settlement. At which time, Chancellor Allen, the author of the decision, saw an opportunity to require directors to oversee legal issues.

In approving the settlement, Chancellor Allen demonstrated that directors could no longer assume that the corporation was in compliance with the law. Rather, they have a “duty to attempt in good faith to assure that a corporate information and reporting system, which the board concludes is adequate, exists, and that failure to do so under some circumstances may, in theory at least, render a director

\(\text{Id. at 128-29.}\)
\(\text{Id. at 130.}\)
\(\text{Id.}\)
\(\text{Id.}\)
\(\text{Id.}\)
\(\text{In re Caremark Int’l, Inc. Deriv. Litig., 698 A.2d 959 (1996).}\)
liable for losses caused by non-compliance.”108 Chancellor Allen treated this duty as an extension of directors’ duty to act in good faith, preventing courts from second-guessing directors’ business decisions.109

To show bad faith, plaintiffs must demonstrate that the board failed in a “sustained or systematic”110 fashion. This includes an “utter failure” by the board to develop a reasonable information-reporting system.111 An actual failure to prevent wrongdoing does not, by itself, indicate that a board failed in its duty to monitor.112 Even a grossly unreasonable failure to act does not meet the bad-faith threshold.113

In Stone, the Delaware Supreme Court reinforced, but narrowed, the Caremark decision, placing directors’ duty to monitor in line with the duty of good faith, a subset of the duty of loyalty.114 As a result, directors breach their duty to monitor when they either “utterly fail[] to implement any reporting or information system or controls” or if they “consciously fail[] to monitor or oversee operations thus disabling themselves from being informed of risks or problems requiring their attention.”115

Stone stemmed from a derivative suit brought by AmSouth Bancorporation shareholders against the board for allowing employees to violate reporting requirements under the federal Bank Secrecy Act. Although the court affirmed Caremark’s good faith standard, it also identified a scienter requirement, stating that “imposition of liability requires a showing that the directors knew that they were not discharging their fiduciary obligations.”116

These key cases and the numerous ones that have followed in their wake establish three key principles: (1) a plaintiff must show scienter—that the board acted with the actual or constructive knowledge that its inaction would harm the corporation, (2) the board is responsible for preventing wrongful or illegal acts, but (3) is not

responsible for monitoring outcomes of decisions of previous boards.\footnote{117} Recent cases indicate a greater willingness to infer knowledge of wrongdoing. In \textit{American International Group v. Greenberg}, the court inferred the defendants’ knowledge from their high level management positions, because it was unlikely that illegal transactions would have occurred without their knowledge.\footnote{118}

The \textit{duty of care} generally requires that directors act in good faith and with the degree of diligence, care, and skill that an ordinarily prudent person would exercise under similar circumstances. At the same time, the business judgment rule “is a presumption that in making a business decision the directors of a corporation acted on an informed basis, in good faith, and in the honest belief that the action taken was in the best interests of the company.”\footnote{119} The rule effectively prevents the judiciary from reviewing, after the fact, the merits of most board’s business decisions. Accordingly, a plaintiff challenging a corporate board’s business decision(s) made on an informed and good faith basis bears the burden of rebutting the business judgment rule presumption.\footnote{120}

The business judgment rule does not protect all corporate action, however. First, the rule does not apply if a plaintiff can show that directors acted with self-interest (self-dealing).\footnote{121} Second, the rule does not apply where directors abdicate their responsibility or when they failed to act, as in duty to monitor cases.\footnote{122} Third, the rule does not apply to decisions lacking a rational business purpose.\footnote{123} Courts make this determination from the vantage point of the directors at the time they made the decision, not with hindsight.\footnote{124} Fourth, the

124 \textit{American Law Institute, Principles of Corporate Governance: Analysis and Recommendations} § 4.01(c)(3) (2010)(comment c).}
rule does not protect decisions involving gross negligence. In the event that the business judgment rule does not apply, the board must prove the “entire fairness” of the transaction.

The business judgment rule rests largely on the presumption that directors (business professionals) – rather than courts – boast the business acumen required to sufficiently assess the economic risk associated with their often complex decisions. The rule protects directors from liability for errors or mistakes in judgment, thereby ensuring corporate freedom to make their own rational and informed judgments without fear of backlash with the benefit of hindsight. Thus, the rule permits immunizing the substance of a decision derived from diligent and informed analysis. “Process” is essential in determining whether the board acted with due diligence.

When applied to antitrust, this produces critical but unresolved issues. First, what is a sufficient monitoring system so that the board has, in good faith, required monitoring and compliance systems that reasonably can be expected to deter, detect, and prevent serious antitrust violations by the officers, employees, and directors of the corporation? Second, what are the red flags necessary for the board to take further action when unlawful conduct may have occurred? Finally, how do the duties of care, the requirement of adequate monitoring and compliance systems, and the business judgment rule interact when the board fails to take action and the corporation is subsequently found guilty or liable, or chooses to settle allegations of substantial antitrust wrong doing?

The case law and commentary provides surprisingly few clues. The answer is likely to be different depending on which area of antitrust and which type of violation is at issue. The following sub-

129 In contrast, the issue has received much more comprehensive treatment in the United Kingdom where the UK competition enforcer, the Office of Fair Trading, has produced an excellent recent comprehensive study of corporate compliance in competition law; see Office of Fair Trading, Drivers of Compliance and Non-compliance with Competition Law, An OFT Report, May 2010, OFT 1227, available at http://www.oft.gov.uk/OFTwork/publications/publication-categories/reports/competition-policy/of1227.
sections discuss the nature of red flags and board duties for the most common types of antitrust violations and suggest that the highest duties should be imposed with respect to cartel type violations, the least for monopolization type offenses, and an intermediate standard for mergers.

B. Interlocking Directorates

The only direct statutory interplay between corporate governance and competition policy can be found in Section 8 of the Clayton Act which states:

No person shall, at the same time, serve as a director or officer in any two corporations (other than banks, banking associations, and trust companies) that are - (A) engaged in whole or in part in commerce; and (B) by virtue of their business and location of operation, competitors, so that the elimination of competition by agreement between them would constitute a violation of any of the antitrust laws…

This provision is limited to corporations above a certain size and where competitive sales are above a certain threshold. Only interlocking directorates between horizontal competitors are covered by this provision, despite its wording suggesting that interlocking directorates between vertically related corporations would be subject

---

131 These limits are indexed to inflation and currently Section 8 of the Clayton Act only applies if the corporations have capital, surplus and undivided profits above $25,841,000 each and where competitive sales are above $2,584,100 and at least 2 per cent of that corporation's total sales or the competitive sales of each corporation are at least 4 per cent of that corporation's total sales. COMMISSION ANNOUNCES REVISED FILING THRESHOLDS FOR CLAYTON ACT ANTITRUST REVIEWS; FOLLOWING REVIEW, COMMISSION DECIDES TO RETAIN THE AMPLIFIER RULE; FTC APPROVES FINAL CONSENT ORDERS IN CASES AGAINST SIX BUSINESSES THAT CLAIMED TO COMPLY WITH AN INTERNATIONAL PRIVACY FRAMEWORK; FTC APPROVES FINAL CONSENT ORDER IN MATTER CONCERNING WATSON PHARMACEUTICALS AND ARROW PHARMACEUTICALS, AVAILABLE AT HTTP://WWW.FTC.GOV/OPA/2010/01/HSR-SAFEHARBR.SHTM.
to this provision as well.\textsuperscript{132} Section 8 also does not reach interlocking directorates between bank and non-bank corporations.\textsuperscript{133} Although there are occasionally boundary issues as to whether corporations should be deemed horizontal competitors,\textsuperscript{134} or whether the statute reaches situations where the corporation own subsidiaries which compete, the statute is straightforward enough. It thus represents a per se ban on a limited number of types of horizontal interlocking directorates.\textsuperscript{135} No proof of competitive effects is required.

As a result, individuals and corporations simply act accordingly in the real world. There is not that much litigation.\textsuperscript{136} When disputes arise, the remedy is normally the resignation of a director from one of the two competing enterprises or occasionally the divestiture of a business line so the firms are no longer competing and no longer subject to these provisions. Sometimes, the firms act preemptively; sometimes the remedy is embodied in a consent decree depending on the stage of the investigation or litigation.

Most recently, Eric Schmidt, then the CEO of Google, resigned as a director of Apple to resolve questions whether his dual service on both company’s boards violated this provision. Press reports indicate that the FTC is continuing to investigate whether other board level interlocks between these two actual and potential competitors raises similar issues.\textsuperscript{137}

\end{footnotesize}
Preventing conflicts of interest and creating proper incentives for directors underlie this entirely sensible, but limited provision. Interlocking directorates between competitors can pose both competition and corporate governance problems. They can exacerbate the agency cost problems when a director’s decisions can benefit his own interests in his other role with the competitor rather than serve the best interests of the shareholders at the company where he serves as a director. At an extreme, they can be a direct violation of the duty of loyalty for either or both of the corporations where the director serves.

These concerns must also be balanced against the value of knowledgeable experienced directors who have the ability to play an important engaged role as outside directors to minimize the agency costs that is the avowed goal of corporate governance law in the first place. If the statute operates as intended, obviously a certain number of highly qualified directors will be excluded and publicly traded companies will have to find outside directors from a somewhat different pool of candidates.

On the competition side of the fence, the dangers can be equally straightforward. Interlocking directorates could facilitate outright collusion, but could also be a facilitating mechanism for the exchange of information or other means of oligopolistic coordination and tacit collusion. Interlocking directorates can also affect key board level decisions involving mergers, acquisitions, joint ventures, entry into new markets, innovation initiatives, and other key strategic determinations that can affect the competitive efforts of one or both of the affected firms.

The current statute, while not perfect, is nonetheless an appropriate compromise. It can be both over- and under-inclusive in particular settings. Section 8 also is not precise in the definition of competing firms which raises issues for companies with operations in multiple markets and for companies where the boundaries of even

specialized operations are evolving rapidly, as in the high-tech sector. However, further precision would probably come at such a high cost that the incremental gains would not be worthwhile for either competition policy or corporate governance. What emerges most is the value of first Congress, and then the courts and commentators, identifying an important, but limited, area where there is real utility from thoughtfully addressing previously these two separate legal spheres in a unified manner. If the prohibition of interlocking directorates is a qualified success, then the failure to integrate corporate governance and competition policy in more pressing areas of concern is a far more troubling example of failing to draw these same connections.

C. Cartels

Perhaps the most important area of corporate compliance relates to the deterrence, prevention, detection, and response to credible allegations of price fixing, bid rigging, and related cartel behavior. These are the hard-core cartel offenses that are per se unlawful and normally prosecuted as criminal violations by the Antitrust Division. The conspiracy itself is the offense and no proof of effect is required. Essentially these per se unlawful conspiracies are presumed unreasonable and no rebuttal evidence is permitted as to their intended or actual effect. The Supreme Court has gone so far as to state in dicta that cartels are “public enemy number one” for antitrust purposes.

Whether or not this is literally true, criminal conviction (and even investigation) holds heavy consequences for the corporations and individuals involved. Section 1 of the Sherman Act makes an antitrust crime a felony. The criminal penalties for a corporation are fines up to the higher of $100,000,000 or double the gain or loss involved in the offense. Fines for cartel offenses have reached as high as

---

141 Gerber, supra note 134, at 118-20.
142 Socony-Vacuum v. United States, 310 U.S. 150, 224 n.59 (1940).
147 Id.
$500,000,000 and there are dozens of fines in excess of
$100,000,000.\footnote{148}

For individuals, the monetary penalties are smaller, but the
stakes even higher. Individuals, unlike corporations, are subject to
imprisonment and not just heavy fines. A violation of Section 1 can
result in a prison term of up to ten years.\footnote{149} Virtually every conviction
in modern times has resulted in a prison term for corporate employees,
officers, and directors, ranging from relatively low level employees to
Presidents and CEOs.\footnote{150} The longest prison term to date has been 46
months.\footnote{151}

The criminal prosecution is often just the beginning of the
troubles for the firms involved. A conviction or guilty plea in a
government criminal case is prima facie evidence of liability in any
follow up civil treble damage litigation who would then need only to
prove standing, causation, and damages in order to receive treble
damages, attorneys fees, and costs.\footnote{152} Many of these actions are filed
in the form of a class action which further raises the stakes.
Settlements by co-defendants are deducted pre-trebling.\footnote{153} In Pari
delicto defenses are not allowed.\footnote{154} Liability is joint and several.\footnote{155}
Contribution claims among defendants are not allowed,\footnote{156} although
contractual judgment sharing agreements have been allowed.\footnote{157}
Further, to the extent that an antitrust can be deemed an intentional
crime or tort, antitrust judgments may not be insurable.\footnote{158}

damages. \textit{Id.} at 7.3, & 15.3. \textit{See generally} 17 \textsc{Williston on Contracts} § 49:115
One of the government’s most effective anti-cartel tools is the amnesty and leniency program which has been widely copies abroad. Beginning in the early 1990s, the Department of Justice adopted a set of formal written guidelines setting forth when the government would grant immunity for cartel participants who informed the Antitrust Division of cartel activity and provided truthful cooperation going forward.\textsuperscript{159} Under the amnesty and leniency program, corporations and individuals receive immunity from criminal prosecution if:

- At the time the corporation comes forward to report the illegal activity, the Division has not received information about the illegal activity being reported from any other source;
- The corporation, upon its discovery of the illegal activity being reported, took prompt and effective action to terminate its part in the activity;
- The corporation reports the wrongdoing with candor and completeness and provides full, continuing and complete cooperation to the Division throughout the investigation;
- The confession of wrongdoing is truly a corporate act, as opposed to isolated confessions of individual executives or officials;
- Where possible, the corporation makes restitution to injured parties; and
- The corporation did not coerce another party to participate in the illegal activity and clearly was not the leader in, or originator of the activity.\textsuperscript{160}

If a corporation qualifies for leniency, directors, officers, and employees of the corporation also will not be charged criminally if they admit their wrongdoing with “candor and completeness” and continue to assist the Division throughout the investigation.\textsuperscript{161}

\textsuperscript{160} Corporate Leniency Policy, \textit{supra} note 159, at Section A. Alternative discretionary conditions for granting immunity are set forth in Section B of the policy.

\textsuperscript{161} \textit{Id.} at Section C.
Immunity from criminal prosecution will not shield the corporation from private damage suits. In fact, it normally makes settlement of subsequent private litigation for cartel overcharges almost inevitable since the corporation has confessed its guilt and provided assistance to the Justice Department in the prosecution of the other cartel members. In order to enhance the incentives to take advantage of the amnesty and leniency program and turn against other cartel members, Congress subsequently passed legislation that provided that cooperating firms normally would only be liable for single damages for private litigation in connection with cartel activity subject to a grant of immunity under the amnesty and leniency program. As a result of the combined incentives of the amnesty and leniency program, the vast majority of recent large domestic and international cartel cases have originated from cartel members who have defected and disclosed the cartel to the Antitrust Division pursuant to the program. At least thirty foreign jurisdictions have adopted similar programs further increasing the incentives to turn in fellow cartel members for immunity or leniency, but complicating the process of coordinating the different procedural and substantive requirements of each program.

The growth of amnesty and leniency programs is just part of the growing international consensus that price fixing, bid rigging, and related offenses should be deemed hard-core cartel offenses and should be illegal under national or regional law and vigorously investigated and punished by the relevant competition authority. For example, the thirty-plus nations of the Organization for Economic Cooperation and Development (“OECD”) recognized that hard core cartels are the most egregious violations of competition law and that effective action against hard core cartels is particularly important from an international perspective. The 1998 OECD Recommendation

---

163 Hammond, supra note 32, at 4.
165 Organization for Economic Cooperation & Development, RECOMMENDATION OF THE COUNCIL CONCERNING EFFECTIVE ACTION AGAINST HARD CORE CARTELS (adopted by the Council at its 921st
advises member countries to ensure that their competition laws effectively halt and deter hard core cartels by providing for effective sanctions and adequate enforcement procedures and institutions to detect and remedy hard core cartels.166

Most of the major competition law jurisdictions now take a similar tough stance on cartel activity. Although the European Union does not criminalize cartel activity or impose individual liability, it does impose fines of up to 10% of the world-wide annual turnover of the enterprises involved.167 These fines often have equaled or exceeded the criminal fines imposed by the United States in connection with the same cartel operating in both jurisdictions.168 Although penalties and the level of enforcement differ, an increasing number of countries including Canada, the United Kingdom, Ireland, Brazil, and Australia, are enacting and enforcing criminal price fixing provisions169 and/or seeking to create meaningful private rights of actions for the victims of price fixing and related cartel activity.170

The criminal penalties on corporations and other business entities, imprisonment of key corporate officers and employees, potential disqualification of directors, overall financial consequences, as well as collateral debarments from doing business with certain public sector customers are frequently material for the financial performance of the corporation and may be required to be reported to the SEC and disclosed to the public. This in turn raises additional concerns under federal securities regulation and increases the potential for shareholder derivative and class action litigation.

This suggests that there are unique red flags associated with the role of corporate boards in connection with cartel type activity. First, the decision to apply for leniency is normally a board decision. Second, for a board to consider, and then reject, applying for

---

166 Id.
168 II ATWOOD, BREWSTER & WALLER, supra note 167, at § 16.2.
169 Chavez, supra note 163, at III G.
unconditional amnesty would be condoning a criminal felony and automatically constitute a breach of the board’s fiduciary duty. The business judgment rule would not protect such a decision.\textsuperscript{171} Board members would be exposed to significant liability in shareholder derivative litigation and conceivably as aiding and abetting the conspiracy in the underlying antitrust violation. In addition, to reject a chance at unconditional amnesty is to risk another member of the cartel having the opportunity to seek amnesty receive the benefits and place the first corporation in the difficult position of almost certainly having to defend both criminal and civil litigation with a different cartel member obliged to truthfully and fully cooperate with the government at every step of the process.

But this first scenario of outright rejection of an opportunity for amnesty is both extreme and unlikely. Intermediate scenarios include when it becomes publicly known that another member of the industry in the United States or abroad has sought or received amnesty in connection with cartel activity. Once again, it is probably too late to take action, although the possibility of a discretionary amnesty application (or application in another jurisdiction) is still available. However, in the real world, amnesty is probably too late and the board’s choice is to contest liability if the facts and law warrant or to seek a guilty plea with a reduced sentence and fine as the only practical alternative.

Other real world variations of potential red flags for board consideration include the execution of a search warrant or dawn raid of company premises, the receipt of a grand jury subpoena, the receipt of a civil investigative demand, press reports of grand jury or civil antitrust investigations, the filing of a civil class action, individual treble damage, or civil governmental cases, a history of prior antitrust violations, the receipt of a demand letter threatening litigation, disturbing results from an antitrust audit or other internal investigation or compliance program, the surfacing of an internal whistleblower, customer complaints of anticompetitive conduct, and so on down to unsubstantiated rumor and innuendo. In most of these variations, the more likely scenario is that a corporate board was not aware of the cartel activity or the corporation’s participation in the cartel until it is too late. But the question for corporate governance, corporate

\textsuperscript{171} FANTO, DIRECTORS’ AND OFFICERS’ LIABILITY, supra note 16, at § 2.23(c); ALI Principles, supra note 21, at § 4.01.
compliance, corporate responsibility, and director liability is what should the board have known and when should they have known it.

Even in the absence of these legal and regulatory red flags, there are business, economic, and industry factors should trigger at least reflection by a corporate board whether something more needs to be done. Antitrust economists are in broad agreement that some of the industry dynamics that are prone to collusion include a small number of players, a homogenous product, price transparency, widespread exchange of information among competitors, heavy contacts between competitors in a trade association or other context, and/or signaling through the press and public announcements about future pricing and production.  

When such factors are part of the daily life of the corporation and its competitors willful ignorance should not be a shield for liability.

Cases like Caremark and Stone establish that the corporation should have meaningful effective compliance programs and the board should be aware of those programs and involved such that the compliance program functions properly. No case suggests that the mere fact that illegal activity occurred, by itself, constitutes a breach of the board’s duties toward the shareholder no matter how dire the consequences to the corporation or the shareholders. And yet, something more than setting up a compliance program in good faith and then ceasing to pay attention is required.

However, the danger is that the current legal structure creates incentives to engage in what Daniel Sokol has dubbed “cosmetic compliance.” The risk is that the corporations will engage in just enough compliance efforts to avoid legal liability but not enough to actually detect anything, lest the board then be required to actually do something about it in order to avoid liability.

The federal criminal sentencing guidelines provide some additional guidance. These sentence guidelines were at one time mandatory, but now serve as voluntary guidelines to reduce sentencing

---

174 Sokol, Cartels, supra note 172, at *45 & n. 269.
They indicate that the existence (or lack thereof) an effective compliance and ethics program will affect the culpability score of the corporate defendant which will in turn affect the amount of the applicable criminal fine for all federal corporate criminal convictions including antitrust.\textsuperscript{177} In addition the maintenance of an effective compliance and ethics program normally also will be a term of the probation of a corporate defendant.\textsuperscript{178}

In order to qualify as an effective compliance and ethics program, the organization must:

1) Exercise due diligence to prevent and detect criminal conduct; and

2) Otherwise promote an organizational culture that encourages ethical conduct and a commitment to compliance with the law.\textsuperscript{179}

Due diligence in this context means that the board of directors, as the governing authority of the corporation “shall be knowledgeable about the content and operation of the compliance and ethics program and shall exercise reasonable oversight with respect to the implementation and effectiveness of the compliance and ethics program.”\textsuperscript{180} After establishing and promoting the program, the organization must also take reasonable steps to make sure that the program is being followed (including monitoring and auditing), periodically evaluating the program, utilizing statistical screening techniques of company data, creating mechanisms for the anonymous and/or confidential reporting of violations, and taking reasonable steps to respond appropriately to criminal conduct.\textsuperscript{181} Together, these requirements lay out a road map, but not an instruction manual, for corporate boards which are serious about effective compliance in the cartel context and other areas of federal criminal law for corporations.

\textsuperscript{177} Federal Sentencing Manual, supra note 174, at § 882.1.
\textsuperscript{178} Id. at § 882.1.
\textsuperscript{179} Id. at § 882.1(a)(1-2).
\textsuperscript{180} Id. at § 882.1(b)(2).
\textsuperscript{181} Id. at § 882.1(5-7); see also Rosa M. Abrantes-Metz, Patrick Bajari & Joseph E. Murphy, \textit{Antitrust Screening: Making Compliance Programs Robust}, available at \url{http://ssrn.com/abstract=1648948}.  

There also is the possibility of director disqualification. While SEC regulations bar any unfit person from serving in an executive position in a publicly held company,\textsuperscript{182} no such explicit statutory authority exists in the antitrust area in the United States. However, director disqualification for competition law violations is subject to statute in the United Kingdom and elsewhere.\textsuperscript{183} In the 2002 UK Enterprise Act, there is the possibility of the Office of Fair Trading applying for a Competition Disqualification Order in addition to the other penalties provided for violation of the UK or EU competition rules.\textsuperscript{184} Here too, the ultimate test is whether the director is unfit to manage a company.\textsuperscript{185}

The OFT recently has issued revised guidelines indicting when they are likely to use these provisions in the future.\textsuperscript{186} Normally, the OFT will require a prior definitive decision that a competition violation\textsuperscript{187} has occurred, although it has the power in exceptional circumstances to proceed even in the absence of a prior violation.\textsuperscript{188} The guidelines also suggest that director disqualification normally will be sought only for the more serious competition violations.\textsuperscript{189}

While the director disqualification process is likely to be used for situations where the director has actively participated in the violation, the more interesting sections of the guidelines pertain to those directors who “ought to have known” about the violations.\textsuperscript{190} While no bright line rule is possible, the OFT will take into account such factors as the director’s role, position, knowledge, skill, experience, responsibilities and available information, as well as the relationship between these roles and factors and the persons

\end{footnotes}
responsible for the violations. While this is not inconsistent with the general guidelines provided by cases like Caremark, it is more specific, more focused on competition issues, and represents a middle ground between draconian personal liability and virtual immunity under the US business judgment rule.

There are no equivalent statutes or guidelines in the United States for competition offenses. Seeking such a statutory amendment would be helpful, but appears to be politically unrealistic. Even in the absence of specific statutory authority, there is the possibility of barring certain directors, officers and employees from the company or industry for varying lengths of time as part of court judgment and consent decrees for fraud and serious regulatory violations. From time to time, guilty pleas in antitrust cases have included similar language, but no systematic practice or plan appears to be at work. Formal or informal versions of the UK statute and OFT guidelines would go a long way to filling the void left by state and federal law when corporate boards have failed to act because they failed to notice that anything was amiss until it was too late. As Douglas Ginsburg and Joshua Wright further note, increasing personal responsibility (rather than corporate fines) may be the only way to both increase deterrence and minimize agency costs.

---

191 Id. In addition, the guidance indicate that the OFT normally would not seek disqualification of any director of a company which has benefitted from leniency. Id. at 4.12. The OFT reserves the right to seek disqualification if the director was personally involved in the offense, opposed the amnesty application, or failed to cooperate with the resulting investigation. Id. at § 4.14.
Another key appears to be in the creation of a meaningful compliance program both for antitrust and other legal and regulatory risks.196 Although theoretically having a compliance program and then violating it could cut against a corporation or director, in practice it does not work that way. Both the US sentencing guidelines and the OFT director disqualification guidelines provide benefits and protections to corporations that have such programs and do not impose special burdens on the officers and directors who create or supervise those good faith compliance programs.

The ultimate question is what types of cartel red flags should a board ignore at its peril? When ought a board to know that something is amiss? What should be the penalties if they violate these duties? No bright line rules emerge for the honest and well meaning board member that has not actually participated in the violation. However, the case law leaves much to be desired and comparisons with foreign practice and other areas of US law enforcement and regulatory experience require particularization for the competition area.

At a minimum, directors need to be aware of the per se illegality and penalties for price fixing, bid rigging, market division, customer allocation and similar cartel activity. No officer or director can participate in such activity, cover up in such activity, or knowingly allow any person to do so on behalf of the company. Board members must create meaningful corporate compliance programs, relying on trained professionals, to deter, prevent, and detect such activity and ensure that such programs are instituted and taken seriously at every level of the corporation. Training must be regular and ongoing at all levels of the corporation. Compliance audits, screening techniques, and revisions to the compliance program will be required from time to time. Whistleblowers must be encouraged and not punished. Credible complaints of wrongdoing from any source must be taken seriously. Prompt action by the board will be required if credible allegations of violations appear from any of these sources.

When such vigilance is present, then board members should be protected from personal liability and the corporation from shareholder litigation when genuinely unexpected violations prove to have

occurred. When such vigilance is lacking, officers, directors, and corporations should not be able to hide behind overly generous protections from state corporate law doctrines designed to address more mundane duties and harms.

D. Governance and the Rule of Reason

Corporate governance issues affect a host of other issues also governed by Section 1 of the Sherman Act. Any agreement which unreasonably restricts competition is unlawful under Section 1. As discussed above, only a handful of agreements are per se unreasonable and normally prosecuted criminally. The rest are judged under a broader rule of reason analysis on a case-by-case basis and are the subject of civil litigation if challenged by either the government or private parties.

Corporate governance issues arise both as to whether there is even an agreement between two economically independent economic actors and whether any such agreements unreasonably restrict competition. For example, most sports leagues are comprised of individual franchises owned by competing owners or groups. These economically independent (but interdependent) teams compete both on the field and off the field economically, but cooperate in the creation and maintenance of the league itself. As a result most sports leagues are subject to normal antitrust review unless protected by a statutory or judicial immunity.197

In contrast, several professional sports leagues have organized themselves as single entities owning all franchises and player rights in order to avoid even constituting a “contract, combination or conspiracy” within the meaning of Section 1 of the Sherman Act. The most prominent of these peculiar structures for a sports league

Corporate Governance and Competition Policy

39

premised on competition between teams was Major League Soccer which switched to a more traditional ownership structure several years after its creation over concerns that the relative lack of success of the business model in comparison to the minimal risks associated with being subject to Section 1 of the Sherman Act.198 Similar issues were raised in the recent Supreme Court American Needle decision where NFL Properties and its licensing operations was held to be an agreement within the meaning of Section 1 since it involved decisions by economically independent actors.199

Corporate governance can also affect not just whether Section 1 of the Sherman Act applies, but what test will be applied in judging the legality of the agreement. The Supreme Court in its unanimous decision in American Needle was clear that some types of agreements are necessary in order to create professional sports and other joint enterprises in the first place.200 As a result some form of the rule of reason must be applied to such agreements and most will be held not to unreasonably restrict competition after a full examination of the pro- and anti-competitive aspects of the particular agreement.201

These types of corporate governance issues came to the forefront of antitrust in the Visa/MasterCard litigation brought by both the federal government and in massive private treble damage antitrust class actions. While the governance arrangements within and between Visa and Mastercard have been characterized as cartels,202 the reality is more complex.

Both Visa and Mastercard were created as networks owned and operated by the member banks. Both associations had boards of directors heavily weighted toward the largest banks issuing that particular credit card, which were often the same set of banks. Each association had by-laws that permitted banks to issue both Visa and

202 See e.g., Lloyd Constantine, Priceless: The Case That Broke Down the Visa/Mastercard Bank Cartel (2009).
Mastercard cards, but prohibited banks from issuing any other credit cards, such as Discover or American Express. The Antitrust Division challenged this governance structure as a civil rule of reason violation of Section 1 of the Sherman Act and sought injunctive relief. The Second Circuit ultimately held this practice unlawful under the rule of reason. 203

In addition to complying with the terms of the judgment in the government case, Mastercard also fundamentally altered its ownership and governance structure through a subsequent initial public offering of stock. At least part of the strategy behind the Mastercard initial public offering was an attempt to further reduce antitrust exposure by changing the fundamental nature of the entity from a cooperative enterprise run by competitors into a single economic actor owned by its share holders with the former member banks having no day-to-day control over network policies and operations. 204

The IPO established a relatively unusual governance structure which gives member banks more economic exposure than voting rights, “flipping the usual dual-class voting structure upside-down.” 205 Despite these helpful changes, numerous other policies and pricing decisions of the Visa and Mastercard networks have also been the subject of continued private antitrust challenge. 206

---

205 Fleischer, supra note 204, at 138. The IPO also established a charitable foundation which holds a significant block of Mastercard stock which Professor Fleischer contends provides both takeover protection and also gives the member banks continuing influence without antitrust exposure. Id.
206 In addition, to the government case discussed above, Visa and Mastercard have been subject to substantial private treble damage antitrust litigation relating to the interchange fees they charge merchants, requirements that merchants accept both credit and debit cards, and separate policies that required merchants not to impose their own fees for processing credit or debit transactions or providing discounts for cash purchases. The largest of these private cases settled for approximately $3 billion. See Constantine, supra note 202. For an overview of these antitrust issues see Steven Semeraro, The Antitrust Economics (and Law) of Surcharging Credit Card Transactions, 14 Stan. J. Bus. & Fin. 343 (2009); Steven Semeraro, Credit Card Interchange Fees: Three Decades of Antitrust Uncertainty, 14 Geo. Mason L. Rev. 941 (2007); Adam J. Levitan, Payment Wars: The Merchant-Bank Struggle for Control of Payment Systems, 12 Stan. J. Bus. & Fin. 425 (2007); Adam J. Levitan, The Anti-Trust Superbowl: America’s Payment Systems, No-Surcharges Rules, and the Hidden Costs of Credit, 3 Berk. Bus. L.J. 265 (2005).
The importance of corporate governance and antitrust was also illustrated in a far less well known case. The company now known as Verisk was formed originally as Insurance Service Organization, Inc. (ISO) as a captive entity of the insurance industry and mutually owned by the leading competing firms in the industry. ISO drafted standardized language for commercial general liability insurance contracts and performed statistical and other data analyses to aid its owners, the insurers, in underwriting insurance policies. As a matter of corporate governance, ISO was managed by a board of directors comprised of eighteen insurance executives and three non-insurers.

The antitrust concerns arose out of the insurance crisis of the 1980s where insurance premiums skyrocketed and state and local governments found it impossible to obtain certain types of insurances that had been previously offered. Insurance companies and other parts of the industry insisted on more restrictive terms that limited existing coverage in different ways. Prior policy terms were no longer made available.

A coalition of state attorney generals and private parties sued US and foreign primary insurers, reinsurers, retrocessional insurance companies, and ISO for entering into a boycott and other unlawful agreements under the Sherman Act. This litigation ultimately went to the Supreme Court establishing important law as to the scope of the antitrust exemption for the insurance and the international application of the Sherman Act.

As a result of the antitrust litigation, ISO entered into a consent decree with state attorneys and certain private plaintiffs in 1995 and was demutualized, creating a new ownership and governance structure that was independent from the insurers. The new board would consist of eleven members with seven non-insurers, three insurers, and one management director. The new independent board would elect

---

207 Questions of antitrust liability are complicated in this context by the existence of the McCarran-Ferguson Act which creates an exemption for the business of insurance (but not boycotts) where regulated by state law. See 15 U.S.C. § 1012 (2010). See generally AMERICAN BAR ASSOCIATION, SECTION OF ANTITRUST LAW, MONOGRAPH NO. 24, FEDERAL STATUTORY EXEMPTIONS FROM ANTITRUST LAW 133-60 (2007).

210 Id. at ¶ 15 and Attachment I.
the future non-insurer directors and the insurer directors would elect the future insurance directors. 211 The insurance industry was further barred from group participation in the affairs of ISO for a five year period. 212

Later renamed Verisk, the company continued to do business with the industry on a contractual basis for both drafting standard form contracts and data analysis and research. 213 Freed from the conflicting incentives and cumbersome governance structure, the company prospered, deepened its product offerings, entered new markets, made a number of acquisitions and transformed itself into a far more profitable and dynamic entity. By the end of 2008, the firm had annual revenues of $894 million, with revenues for the first half of 2009 over $500 million, in comparison to $220 million at the time of the consent decree. 214 Profits increased substantially over the same period as well. 215 This in turn led to a successful initial public offering in October 2009, 216 providing further indication that good competition policy and good corporate governance can go hand in hand.

E. Mergers and Acquisitions

In terms of the duties of the board, mergers fall somewhere closer to the need for vigilance against cartel activity and the relatively back seat role in terms of guarding against unlawful monopolization and abuse of dominance. It is the traditional province of the board to carefully review any significant acquisitions outside the ordinary

211 Id.
212 Id. at ¶ 13.
215 Form S-1, supra note 213.
216 Amendment No. 7 to Form S-1, supra note 214.
course of business.\textsuperscript{217} The board also is required to authorize any change in control of the corporation.\textsuperscript{218} In addition to questions of fairness and valuation of any acquisition, the board would normally be informed of any significant legal risks, including antitrust issues, in the proposed merger or acquisition and take those considerations into account in making its overall determination in approving or rejecting the transaction.\textsuperscript{219}

The antitrust remedy for an unlawful merger normally is the prospective blocking of the merger prior to closing or its restructuring to eliminate the effect on competition.\textsuperscript{220} Under this scenario, the planning and organization of the transaction obviously entail costs to the corporation as does the pre-merger notification and investigation of the transaction. However, even the abandonment of the merger in the face of an inevitable antitrust challenge or the unsuccessful litigation of a court challenge does not involve imprisonment, criminal or civil fines, or even treble damages under most normal circumstances. While treble damages are theoretically possible for any person who has been injured in their business or property as a result of an antitrust violation, it is difficult to conceive of who could be so injured by a merger which was never consummated. The federal government, state attorney generals, and private parties do however retain the right to challenge an unlawfully anticompetitive merger after consummation with the attendant disruptions and costs of unscrambling the omelet.\textsuperscript{221} But again, such litigation is rare, almost never successful by anyone other than the federal government, and the possibility of damages remote.

Antitrust analysis for mergers and acquisitions is complicated and contingent on questions of market definition, market power, often technical theories of anticompetitive harm, the likelihood of market entry to offset potential harm, likely efficiencies, and occasionally, whether one or both of the merger parties constitute “failing firms.”\textsuperscript{222} This is normally beyond the expertise of the board and often dependent on market facts outside control of corporation or even its merger partner.

\textsuperscript{222} 2010 Horizontal Merger Guidelines, supra note 40, passim.
\end{footnotes}
However, there is mounting evidence from corporate finance community that suggests entire categories of deals are fraught with peril and more likely to destroy, rather than enhance, shareholder value. A growing body of both empirical and theoretical literature has questioned the premises and results of an unconstrained market for corporate control being necessary or sufficient to solve the agency cost problems of corporate governance or create greater efficiency warranting deferential antitrust review of these same mergers. Certain of this literature comes from the corporate finance and accounting fields. Other sources come from the growing field of behavioral economics as applied to antitrust and finance. Together these sources and studies strongly suggest that certain categories of mergers destroy shareholder value and do little if anything to create meaningful efficiencies or enhance market competition. At a minimum corporate governance and antitrust policy should be harmonized to strongly scrutinize and question transactions which work at cross-purposes to both bodies of law.

The corporate finance literature has suggested that certain identifiable categories of mergers typically destroy, rather than enhance, shareholder value. Michael Jensen, a noted finance professor, observed relatively early on that value destroying mergers are more likely when managers of firms have unused borrowing power and large free cash flows. This is yet another illustration of the problem of agency costs and the tendency for managers to invest in below average or even value destroying mergers, rather than other investments and payouts that are more beneficial to shareholders.

Professor James Fanto has summarized numerous studies from the more recent corporate finance literature to conclude that mega-mergers of roughly equal firms financed through stock-for stock mechanisms are another type of transaction that is particularly suspect.

---

for destroying shareholder value.\textsuperscript{225} While the ill-fated AOL-Time Warner merger is the poster child for this type of transaction and unfortunate outcome,\textsuperscript{226} it is hardly alone. Professor Fanto has identified numerous mergers such as Travelers-Citicorp, US West-Qwest, and others as further examples of this trend.\textsuperscript{227} Fanto also notes that mergers dependent on poorly articulated synergies are also particularly suspect for their value destroying tendencies.\textsuperscript{228}

More recent studies have confirmed these dismal conclusions.\textsuperscript{229} A 2005 study by Moeller, Schlingemann and Stulz found that “from 1991 to 2001 (the 1990s) acquiring firms’ shareholders lost an aggregate $216 billion, or more than 50 times the $4 billion they lost from 1980 to 1990 (the 1980s), yet firms spent just 6 times as much on acquisitions in the later period.”\textsuperscript{230} Most of the studies that suggest that mergers in general may create value focus on short-term changes in stock valuations of the acquired and acquiring companies following the public announcement of the transaction. These studies are not surprising since the acquired corporation’s stock is likely to increase in value given that the acquisition price is frequently a premium of the current stock price. This increase is often greater than any decrease of the acquiring company’s stock price leading certain finance scholar’s to conclude that mergers (properly

\textsuperscript{228} Fanto, \textit{Braking the Merger Momentum}, supra note 227, at 279.

controlled for other variables) are efficiency enhancing and value enhancing.\textsuperscript{231}

Longer term studies of the actual performance of the deal years down the road reach very different conclusions. At a minimum, there is no significant support for the claim of broad efficiencies in the overall market for mergers.\textsuperscript{232} Too high a percentage of mergers and acquisitions end badly to take comfort in an unregulated market for corporate control as the answer to either the agency cost problem in corporate governance or the pursuit of an efficient competitive market for antitrust purpose. Nor do these studies cast any doubt on the more particularized claims of Fanto and others that stock-for-stock mega-mergers of equals remain the most suspect category of corporate transactions likely to produce massive wealth destruction for shareholders.

Studies by the Federal Reserve Bank and other business scholars have suggested that there may be slightly different results for financial and banking mergers versus those in the industrial sector.\textsuperscript{233} An analysis by Federal Reserve Bank staff of over 250 prior studies suggests that mergers in the finance and banking sector increased market power, produced no meaningful cost efficiencies, some efficiencies in payment systems, and some increased systematic risk.\textsuperscript{234} However, even in the banking sector sound governance mechanisms can be helpful in preventing bank executives from pursuing value destroying acquisitions.\textsuperscript{235}

Corporate governance principles as well as behavioral economics go a long way to explaining why corporations would consistently engage in behavior that is so harmful to shareholder

\begin{flushleft}

\textsuperscript{234} Berger, Demsetz & Strahan, \textit{supra} note 233, at 154-55, 173-74.

\end{flushleft}
interest. The central insight going all the way to Berle and Means is that the incentives of officers and directors are not well aligned with those of shareholders. Many scholars have focused on the incentives and rewards for corporate decision makers (the officers and particularly the CEO) to explain sub-optimal decisions and the continued biases toward mergers even when they are not value enhancing. Studies from the 1980s through the present show a tendency of management to pursue acquisitions not in their shareholder interests in order to enhance their employment security, build empires, or simply expand the perquisites of office.\textsuperscript{236}

A variant of this explanation focuses on CEO autonomy, hubris, overconfidence, and narcissism as key explanations of the pursuit of mergers which both end poorly and can be predicted to do so.\textsuperscript{237} Similarly, weak corporate governance, lack of information, and the continued misaligned interests of directors beholden to corporate insiders suggest that the board of directors will not typically be in a position to stop these suboptimal acquisition plans once embarked upon by a powerful CEO.\textsuperscript{238}

Behavioral economics also provides additional insight into why even well-meaning CEOs as the key players in this process may behave in such a fashion. Behavioral economics documents through empirical research how actual human beings behave “quasi-rationally” rather than as the purely rational profit-maximizing entities assume in most traditional law and economics analyses.239 Instead of the purely rational profit maximizing individual or organization as posited by the rational choice theorists, behavioral economics seeks to document that decision makers tend to act with bounded rationality, bounded willpower, and bounded self-interest.240

This behavioral research documents how both consumers and business decision makers are prone to predictable biases and use known heuristics and other shortcuts that produce sub-optimal decisions in the real world. Some of the well-known biases and heuristics relevant to the decision to enter in mergers and acquisitions which frequently result in value destroying transaction include

240 Stucke, Behavioral Economists, supra note 239, at 527.
myopia, loss aversion, endowment effects, status quo bias, extremeness aversion, over-optimism, hindsight bias, anchoring heuristics, availability heuristics, framing effects, representative bias, saliency effects, and others.241 One does not have to stretch to find numerous acquisitions driven by corporate decision makers suffering from over-optimism combined with numerous other all-too-human tendencies to produce poorly conceived or over-priced acquisitions dependent on future synergies and efficiencies that were unachievable in the real world. Richard Thaler has described these types of outcomes more generally as the Winner’s Curse.242

Professor James Fanto surveys the securities filings for the ten largest mergers and acquisitions for 1998, 1999, and 2000 and concludes that most of these biases are present in the statements that managers and board members relied upon, were legally bound by, and/or used to persuade shareholders to approve the very largest transactions of those years.243 Most of these transactions were in turn among the most significant value destroying deals of their eras.244

The Moeller, Schlingemann & Stulz 2005 study notes that most of the largest value destroying acquisitions were the last in a series of acquisitions by the acquiring firm.245 This further suggests that the behavioral economics factor identified by Fanto and others, such as over-confidence, hind sight bias, and framing effects have played an important role in the destruction of shareholder wealth.

These all-too-human tendencies combined with broad CEO autonomy and hubris produce incentives to pursue certain mergers and acquisitions which benefit no one other than senior management. At the same time, a passive board of directors generally lacking in information and resources to challenge senior management similarly creates incentives to approve transactions which benefit few other than senior management.

241 Fanto, Quasi-Rationality, supra note 227; Stucke, Behavioral Economists, supra note 239, at 527-28.
242 RICHARD H. THALER, THE WINNER’S CURSE: PARADOXES AND ANOMALIES OF ECONOMIC LIFE (1992); Roll, Hubris, supra note 236, at 200 (CEO hubris leading to overpayment by acquiring corporation).
243 Fanto, Quasi-Rationality, supra note 227, at 1380.
245 Moeller, Schlingemann & Stulz, supra note 230, at 781.
Behavioral economics also provides additional insights into the critical issue of entry in the market where the merger has occurred. Once the government (or other plaintiff) has established that the merger is likely to produce anticompetitive effects, they have established a prima facie case that the transaction has violated Section 7 of the Clayton Act. The defendants may then rebut the plaintiff’s prima facie by showing that the merger nonetheless is unlikely to substantially harm competition.

The most typical evidence is that entry barriers to the affected market are so low that any post-merger price increase would be ineffective as a result of inducing timely, effective entry that would be profitable at even pre-merger prices. Professor Avishalom Tor has discussed how the insights of behavioral economics demonstrate that post-entry entry may be more prevalent than normally assumed, but it usually is less effective in disciplining the post-merger exercise of market power than normally believed. Conversely, Maurice Stucke provides numerous examples where even admittedly moderate low entry barriers are insufficient to prevent the exercise of market power.

Even accepting the need for a robust market for corporate control suggests the need for a continued antitrust presence that has been minimized in recent times. If shareholders are going to receive maximum value, this requires rules which forbid collusive bidding for firms and limit the termination of auctions for firms once in play.

---

250 Stucke, Behavioral Economists, supra note 239, at 563-72.
also suggests limiting growing antitrust immunities in the securities law field and an ill-advised over-deference and reliance of the courts on securities regulators to maintain competition in order to maximize shareholder value in the takeover process.\textsuperscript{252}

If management cannot document convincingly why a particular new contemplated transaction of the type that typically has harmed shareholders in the past is different than its predecessor, then the board should have the duty to reject the deal as against the interests of shareholders. If it fails to do so, the board should be held liable, not because the transaction turned out badly, but because the board ignored the red flags of the past and failed in its duty to adequately probe the new transaction in advance. Similarly, if the principal reason that a transaction may enhance shareholder value is the likely increased exercise of market power, rather than dubious efficiency scenarios which typically have not panned out in the past, then the board must similarly do more before the transaction meets with their approval.

Broader changes could do much to better align the incentives of corporate boards to enter into mergers and acquisitions that both increase shareholder value and do not violate the antitrust laws and refrain from transactions that violate either or both legal regimes. Some commentators have proposed addressing this issue by amending the Clayton Act itself to shift the burden of proof and persuasion to the parties to a transaction to demonstrate the pro-competitive and efficiency enhancing aspects of the deal in order to win approval.\textsuperscript{253} While this would certainly do the trick, such a wide ranging proposal raises serious issues beyond the unlikely chances of adoption by Congress. The most noticeable is that it uses antitrust as a club to indirectly achieve governance goals where the real problem is that the deal is value destroying for shareholders, not that it harms competition for the public.

More nuanced proposals on the corporate governance have included increased disclosure to the SEC and shareholders of efficiency claims when such claims are the basis for proceeding with the kind of stock for stock mega-deals that have proved so destructive of shareholder value in the past.\textsuperscript{254} To avoid pro-forma disclosure that does nothing to avoid deter such transactions, post-transaction reporting could be required to document where efficiencies and synergies have been realized and where such benefits have failed to materialize.\textsuperscript{255}

The increased scrutiny for dubious value destroying deals should be on both the antitrust and corporate governance side. There should be increased skepticism of these same types of transactions by the antitrust agencies and courts in addition to increased duties by corporate boards and disclosure to the securities agencies. Antitrust and securities agencies should work hand-in-hand so that parties to mergers and acquisitions are providing consistent, truthful, and credible information to both sets of agencies just as the antitrust agencies currently do with their US sectoral regulators and their foreign counterparts. If efficiency claims are weak, then parties have a more serious burden on the corporate governance side in explaining why the transaction enhances shareholder value. And if the efficiency claims are weak, but the parties are claiming that the transaction nonetheless enhances shareholder value, then they have some antitrust explaining to do. But they cannot have it both ways, or even worse proceed with transactions that fly in the face of the values promoted by both field of law, potentially harming both shareholders and consumers in the process.

F. Abuse of Dominance

Liability for abuse of dominance or monopolization is much more nuanced, almost never condemned without highly intensive inquiry into facts and economics effects, and less subject to international consensus as to theories of liability or remedy. Such cases tend to be fewer and far between but much higher stakes as

\end{itemize}
\end{footnotesize}
illustrated by the Microsoft litigation in the United States,\textsuperscript{256} the European Union,\textsuperscript{257} and elsewhere around the world.\textsuperscript{258} In almost every jurisdiction, such investigations and cases begin with an examination of whether the firm in question has market power which is frequently dependant on difficult questions of market definition. If significant market power is found, then the case then typically turns on very specific analysis of corporate behavior involving pricing, contracting practices, innovation programs, product design, and other questions of corporate strategy. Standards for unlawful monopolization or abuse of a dominant position differ greatly between jurisdictions.\textsuperscript{259}

In the United States, liability increasingly turns on whether the anticompetitive harm outweighs the precompetitive benefits and efficiencies generated by the very same conduct at issue. In modern times, penalties generally are behavioral, rather than structural.\textsuperscript{260} Criminal enforcement is theoretically possible but has not been used since the late 1960s and appears to be abandoned as a realistic option.\textsuperscript{261}

There are very few cases that deal with what should constitute the appropriate red flags in connection with potential liability for monopolization or abuse of dominance. One of the few recent examples arose not surprisingly for the Intel Corp. which recently faced a series of competition law investigations and cases throughout the world.\textsuperscript{262}

\textsuperscript{261} The last known criminal case under Section 2 appears to be from 1967. United States v. Union Camp Corp., Cr. Action No. 4558 (E.D. Va. Filed Nov. 20, 1967)(indictment on file with author).
A shareholder derivative action alleged the board’s failure to prevent Intel from unlawfully monopolizing the market for computer microprocessors.263 The board of directors was ultimately successful because of the failure of the plaintiffs’ to plead particular facts demonstrating that the board had “actual or constructive knowledge” of the wrongdoing such that a failure to respond to the alleged red flags resulted in a breach of their fiduciary duties to properly monitor corporate compliance.264

The court noted that the plaintiffs did “little more than catalog the ongoing investigations into Intel’s wrongdoing” as an attempt to show that by virtue of the existence of numerous red flags, the directors faced “substantial likelihood” of personal liability.265 In other instances, the court found that some of the more specific allegations of red flags at the time of the decision were premature, and thus not grounds for liability. This included an investigation by the European Commission that the court characterized as preliminary.266

In contrast, the court noted that the Japan Fair Trade Commission’s investigation and report on the anti-competitive activities of an Intel subsidiary in Japan could constitute a red flag.267 However the fact that the board complied with the JFTC report showed that it had, in fact, responded to the red flag. Additionally the plaintiff pointed to investigations by the Korean Fair Trade Commission and the New York Attorney General as constituting sufficient red flags.268 However, the court held that the plaintiffs had failed to adequately allege that the individual directors either knew or should have known about the illegal anticompetitive activities.269

Intel thus suggests that there is no reason to think board can micro-manage each decision of firm with market power, although the need for monitoring systems seems appropriate once market power is achieved or becomes a serious risk. However, there are also areas of legitimate concern for dominant firms (like any other corporate entity) where board involvement is more traditional. These can include acquisition of fringe and potential rivals, patterns of deception, broadly exclusionary conduct at the strategic level, rather than operational, level. In short, these will be some areas where the business judgment rule does, and ought to, have some bite in terms of director involvement and ultimate liability as others where it should not suffice as a shield.\(^{270}\) For example, the UK’s statute and guidelines on director disqualification for competition violations state that the competition authority will take into account any genuine uncertainty over the legality of the conduct.\(^{271}\) One commentator expressed the hope that this would particularly be the case for abuse of dominance cases where “the boundaries between competing ‘on the merits’ and illegal conduct can be particularly opaque.”\(^{272}\)

V. Conclusion

Better understanding the ties between corporate governance and competition law should lead to important legal and policy changes. Looking at the fields for their intersections, rather than their differences, opens up potential avenues for change on both sides of the existing fence.

For directors, clear rules are better than complicated highly fact specific inquiries where after the fact second guessing may expose the directors to potential liability. This is the basis for the business dominant position; orders Intel to cease illegal practices, available at http://europa.eu/rapid/pressReleasesAction.do?reference=IP/09/745.

\(^{270}\) In the modern era, it is hard to envision the active participation of the board of directors in the monopolization of an industry as appeared to be the case throughout the gilded era of the late 19th century. See e.g., RON CHERNOW, TITAN (1999)(biography of John D. Rockefeller detailing monopolization of oil refining and transportation industries).

\(^{271}\) OFT Guidelines, supra note 186, at 13.

judgment in the first place. While a director obviously prefers no liability to the possibility of some liability, at the same time “no” is often better than “maybe” when viewed \textit{ex ante} rather than \textit{ex post}. While the existing statutory rules barring interlocking directorates between competing corporations are by no means perfect, they are workable clear rules that most businesses have little difficulty complying with, even though this provision undoubtedly produces both false positives and false negatives from time to time.

Sometimes highly fact specific inquiries may be unavoidable. Clear-cut rules of when a board of directors must take action to prevent or report cartel activity do exist. However, they are few and far between and often limited to situations where it is already too late from the point of view of either good governance or good competition policy. Better incentives can be created for both good governance and effective compliance policies through individual director liability when reasonable steps are not taken to implement and monitor compliance programs which have a reasonable likelihood of deterring, detecting, and reporting hard-core activity. As the business judgment rule teaches us, reasonable judgments should be deferred to, but the failure to exercise judgment is not worthy of deference and director liability may be appropriate where the failure to act has harmed the corporation and its shareholders. Sub-optimal governance and decision making can be further promoted through statutory, judicial, or regulatory director disqualification where board members have been actively complicit or manifestly fallen down on the job. Even in the fuzzier area of rule of reason liability, good governance structures can be designed to minimize both conflicting incentives and anticompetitive consequences.

In the merger area, the corporate finance literature is convincing that mega-mergers on a stock for stock basis between roughly equal competitors are highly likely to destroy shareholder value. There are a number of resulting helpful steps in both corporate governance law as well as antitrust. On the corporate governance, the tendency of stock-for-stock mega-mergers among equals tend to be value destroying argues in favor of enhanced board duties in reviewing and approving such deals.\footnote{Fanto, \textit{Braking the Merger Momentum}, \textit{supra} note 227, at 251-57.} It further suggests the need for enhanced securities disclosure to shareholders and regulators for such categories of value destroying deals or when parties to the transaction seek to rely
Securities and competition regulators equally must be more vigilant in scrutinizing such facile claims which rarely materialize in the real world. Finally, some intermediate standard of review is called for in the courts beside near blind deference to board approval under the current formulation of the business judgment rule.275

On the antitrust side, there needs to be increased attention to the type and categories of deals which prove to be value destroying and why. There needs to be a better understanding of why predicted synergies and efficiencies more often than not are not achieved. More importantly, there needs to be a better understanding of why certain deals may be value enhancing. If there are not substantial synergies and efficiency gains, when is increased market power a more likely explanation?

To be clear, mergers are not unlawful under the antitrust laws because they are stupid, or well-meaning but turn out badly. They only violate Section 7 of the Clayton Act where they have the tendency to substantially harm competition. However, the present situation is the worst of all possible worlds where certain types of mergers typically do nothing for shareholders nor for competition. Even worse, both bodies of law which purport to regulate such transactions have inadequate tools to help shareholders or competition in the market as a whole.

Although it is not phrased this way, there is at least a soft presumption in both corporate governance and antitrust that most mergers and acquisitions are efficient and should be regulated primarily by market forces. The Horizontal Merger Guidelines come closest to this in stating that the “primary benefit of mergers to the economy is their efficiency-enhancing potential.”276 The building empirical and theoretical evidence from the economic, finance, and accounting world as well as behavioral economics suggests this is not inevitably so.277

The key question is ex ante which type of mergers are likely to generate which types of efficiencies with what degree of probability

and what degree of magnitude? To the extent that the economic, financial and corporate governance literature is persuasive that there are categories of mergers which are sufficiently value destroying and that the \textit{ex ante} efficiency claims are strongly suspect then the agencies and the courts should be particularly suspect of such claims. As a result, any legal presumptions should run against such claims.

These collective blind spots cannot be remedied without both communities investing in increased attention to each other’s literature, language, and expertise. For the antitrust community this means greater investment in business theory as a supplement to the already substantial economic expertise brought to bear on merger analysis. For the corporate governance community, this means increased attention to the role of competitive and anti-competitive outcomes in formulating duties and responsibilities for corporate actors. This suggests new possibilities of collaborative research and teaching across formerly separate law school subjects and between law school and business school faculty.

Antitrust lawyers and policy makers can also play a meaningful role in corporate governance as competition advocates. It is common practice for competition agencies, bar associations antitrust committees, specialty antitrust associations, practitioners, and academics to play an active role in competition advocacy more generally.\footnote{See generally D. Daniel Sokol, \textit{Limiting Anticompetitive Government Interventions That Benefit Special Interests}, 17 GEO. MASON L. REV. 119 (2009); Maurice E. Stucke, \textit{Better Competition Advocacy}, 82 ST. JOHN'S L. REV. 951, 957-59 (2008); James C. Cooper, Todd J. Zywicki & Paul A. Pautler, \textit{Theory and Practice of Competition Advocacy at the FTC}, 72 ANTITRUST L.J. 1091 (2005).} This can be in the formulation of antitrust guidelines by federal, state and foreign agencies and/or formulation of policies and rules by sectoral regulators at the federal, state, and local levels. Such competition advocacy must be extended to related issues in corporate governance when government and private groups are formulating policies that seek to ameliorate (or worsen) the conflicting incentives and agency costs that lie at the heart of corporate governance. Only in such a world of deep interaction and continued inter-disciplinary learning will both shareholders and consumers benefit from efficient and shareholder oriented public corporations operating in a more consumer friendly competitive economy.
