

Scaling the impact of  
innovation and research

# A Call to Action from the Global South

In brief

## **A Southern Perspective on Scaling Impact**

This call is a result of the scalingXchange—a virtual gathering of researchers and innovators from across the Global South to learn from scaling experiences and how funders and development agencies can better support scaling efforts.

These researchers authored the call to action as a first step in building a community of funders, development agencies, implementers, researchers and innovators who share our vision: a world in which Southern innovation and research lead to sustainable and equitable impact for the public good.

# The call: Eight actions to help transform how you support scaling

1. Keep your focus on scaling impact

2. Broaden your understanding of participatory approaches

3. Make equity of impact an equal measure to magnitude of impact

4. Address the environment as a part of the scaling system

5. Move beyond a "project logic" to fund impact

6. Scaling only "what works" doesn't work, support a learning culture instead

7. Support Southern solutions

8. Invest in the science of scaling
