The International Development Research Centre is offering five scholarships to assist students undertaking thesis research for the Ph. D. degree in the field of development. Students are expected to have completed all course work and other requirements for the degree and are therefore ready to undertake their research in the following fields as they relate to development.

a) Agriculture, Food and Nutrition Sciences - including plant and animal sciences, fisheries, forestry, human nutrition, and the technologies of preserving, protecting and distributing foods and food materials.

b) Population and Health Sciences - including demography, population policy and related social sciences, the biomedical aspects of reproduction and fertility regulation, the organization of family planning programmes, communications in family planning, health care delivery with special emphasis on people living in rural areas, and environmental public health problems of developing regions.

c) Information and Library Sciences - particularly the design and operation of systems to make information available for development, the construction of data banks to serve the needs of developing countries, the improvement of information and library services in developing countries, the problems of transferring technological methods and skills, and the establishment of specialized information centres on topics primarily of interest to developing countries.

d) Social and Policy Sciences and Human Resources - including the application of social science methodologies to the study of the dynamics of the development process, and especially: the study of smaller rural-oriented cities, patterns of migration, the creation of livelihood and employment opportunities, the development of science policy and the transfer, adaptation and diffusion of technologies, the distributive aspects related to increased productivities, studies in education and especially the application of new and improved technologies of providing educational opportunities relevant to the improvement of the economic and social conditions of people living in rural areas of developing countries.

It is expected that research will be carried out in the developing countries. However, under certain circumstances an exception could be made.

The scholarship is available to graduate students holding Canadian citizenship or with landed immigrant status and a minimum of three years residence in Canada.

Applications for the 1972-73 academic year must be received by the IDRC no later than January 30, 1972. The application forms may be obtained from the Dean of Graduate Studies at your university or from:
